

INVESTMENT POLICY OF THE FUND

The Fund is an absolute return investment fund that aims to create an investment portfolio through active portfolio management that achieves a return for its clients in excess of the benchmark, taking into account a predetermined risk profile. It intends to accomplish this goal primarily by investing on the bond market of the emerging European region. When implementing the Fund's investment strategy, the Fund Manager focuses primarily on emerging European hard-currency (dollar, euro) government and corporate bonds, leveraging its regional expertise. For diversification purposes, the Fund may also purchase other bonds (government securities, corporate bonds, mortgage bonds) typically issued in the region and denominated in local currency, and in addition, it may also conclude forward and other derivative transactions in order to establish an efficient portfolio. We aim to achieve a moderate risk profile when compiling the Fund's portfolio. The Fund makes its investments based on an extensive analysis of the issuer's creditworthiness, including a comprehensive assessment of the risks involved, especially with regard to non-investment grade issuers. The Fund may only conclude derivative transactions for hedging purposes, or in the interest of improving portfolio efficiency. The Fund may also hold units of non-leveraged collective investment schemes that track derivative indices. The Fund may also take on significant foreign currency exposure, which is normally fully covered by the Fund Manager, but depending on market conditions, the Fund may have an open foreign currency position. The Fund seeks to provide returns to its investors primarily through its bond investments.

MARKET SUMMARY

The Fed statements in Jackson Hole were hawkish and severely weighed on market mood. This was accompanied by further gathering speed in Eurozone inflation to above 9%. UST10yr yields rose by almost 62bp, and the 2YR tenor touched a 15-year high of 3.50%. Ramped up by rising expectations of aggressive ECB action, 10YR Bund yields increased by 76bp, with the 2Y tenor almost reversing its entire decline during the summer. In combination with modest spread widening against Bunds, the 10Y BTP yield rose back towards 4%. Following declines of 4-5% in August, major equity indices found a bottom in early September, while credit risk premiums widened across market segments. The US Dollar reached a fresh 20-year high, whereas EUR-USD has been meandering around parity since mid-August. After having experienced steep increases, European prices for gas and power retreated at the beginning of September, in line with crude-oil prices and the broader commodity universe. The fund still keeps its Ukrainian and the remaining part of the Russian corporate exposure and waits for improvement in the Ukrainian-Russia war, in the meantime, we managed to close Lukoil positions, within CEE universe, exposure to MOL, MFB and OTP was adjusted lower, the fund still benefits from the 10YR short Bund position.
