

INVESTMENT POLICY OF THE FUND

The objective of the fund is to get a share of the yields of the Turkish equity market, and to benefit on the Turkish economy growth through equity rates and dividends incomes. In accordance with the risk features of the equity investments, the fund is considered as a high-risk investment. According to the intentions of the Fund Manager, the portfolio of the Fund is predominantly formed by equities publicly issued by foreign companies, so the ratio of equities in the fund may reach the legal maximum at the time. Primary targets of investment are the equities of companies listed on the stock that operate in Turkey or make most of their revenues in those countries. The fund registers its assets in Hungarian Forint, the Fund Manager is entitled to cover part of all the currency risks with forward currency positions, while complying with the effective legal provisions.

MARKET SUMMARY

Although the US inflation rate came in better than expected in August, it is still historically very high, with the second quarter GDP coming in at -0.9%, meaning that the US economy is in a stagflationary environment which is the worst of all economic environments. There was precedent for this in the US in the 1970s, when a declining economic environment was combined with high inflation. Paul Volcker, the Federal Reserve Chairman, solved this by raising short interest rates to over 20% in a coup de grace, which pushed the US economy into a severe recession in 1981. We think that in the current political environment, it is unlikely that the Fed chairman will be willing to do the same.

Europe continues to groan from the effects of the Russian-Ukrainian war. The biggest problem, of course, is that the Russians are using gas supplies as a weapon against Europe, and as a result, energy prices have spiraled out of control on the continent. High energy prices are fueling fears of a hard recession in Europe, and the German producer price index suggests that inflationary pressures in Europe are more likely to accelerate if energy prices do not correct.

Inflation is also a major concern in Hungary. The official inflation rate published by the HNB is also above 13%, but real inflation is closer to 20%. The MNB is trying to curb inflation with its own tools, and has raised the base rate further by 100 basis points to 11.75%, and has indicated that it will raise it even higher in the coming period. The forint reacted favorably to the rate hike, with the EUR/USD exchange rate falling below 400.

The fund achieved a positive return in August and performed in line with the benchmark index. The Turkish economy remains a big question mark. The economy itself is performing well, and although the lira has been relatively stable over the past month, its occasional violent movements are causing serious concerns for investors. Turkey's central bank continues to take a peculiar stance on the blatantly high inflation rate of 80%, having cut its base rate from 14% to 13%. As a result, investors are trying to protect themselves against inflation by fleeing into the stock market. In August, the banking sector has performed exceptionally well as they have access to funds at the base rate and can borrow at inflation levels. Although the allocation was good during the month, the steel sector, gold mines and technology stocks were underweight, but unfortunately there were a few stocks that rose a lot in a short period of time and these were also underweight. In the last few months we have tried to be overweight in stocks that were export oriented, but we have changed that in the last month and we are trying to follow a dynamic strategy in stock selection. The fund is at 98% against the benchmark index.
