

INVESTMENT POLICY OF THE FUND

The objective of the fund is to be able to benefit on global megatrends spanning over economic cycles. Such trends can be demographic changes (aging society, emerging markets), improving efficiency due to the scarce resources (renewable energy sources, energy efficiency), urbanization or even technological innovation. The fund basically wishes to achieve these objectives by collective investment instruments, mainly via ETFs distributed on stock, and open-ended public investment funds. By its nature, the fund mainly intends to hold sectoral, thematic ETFs, investment funds. Megatrends are long-term changes having permanent impact on our social and economic environment. The fund wishes to benefit on equity profit increase of companies that may become winners of these trends. Megatrends are usually global long-term processes spanning over normal economic cycles impacting the entire world. As a result, the fund does not have geographical specification. As the fund wishes to benefit on very long-term trends, and is considerably exposed to the stock market, we recommend the fund to risk-taking investors, who wish to invest on long term. Fulfilling our duty under the law, we hereby inform all investors that the fund is a fund investing in investment funds, i.e. it does or may invest more than 80 percent of its assets according to its investment policy to units or securities issued by other collective forms of investment. The fund, however, does not wish to hold more than 20 percent weight from any investment fund. The Fund may hold derivative position for equity index up to 20 percent to efficiently formulate the portfolio. The Fund's assets are registered in EUR. The Fund solely invests in investment forms, where the expense ratio is below 2.5 percent, but it is always the Fund's goal to keep the average charge rate of the underlying collective investment instruments below 1 percent.

MARKET SUMMARY

Although the US inflation rate came in better than expected in August, it is still historically very high, with the second quarter GDP coming in at -0.9%, meaning that the US economy is in a stagflationary environment which is the worst of all economic environments. There was precedent for this in the US in the 1970s, when a declining economic environment was combined with high inflation. Paul Volcker, the Federal Reserve Chairman, solved this by raising short interest rates to over 20% in a coup de grace, which pushed the US economy into a severe recession in 1981. We think that in the current political environment, it is unlikely that the Fed chairman will be willing to do the same.

Europe continues to groan from the effects of the Russian-Ukrainian war. The biggest problem, of course, is that the Russians are using gas supplies as a weapon against Europe, and as a result, energy prices have spiraled out of control on the continent. High energy prices are fueling fears of a hard recession in Europe, and the German producer price index suggests that inflationary pressures in Europe are more likely to accelerate if energy prices do not correct.

Inflation is also a major concern in Hungary. The official inflation rate published by the HNB is also above 13%, but real inflation is closer to 20%. The MNB is trying to curb inflation with its own tools, and has raised the base rate further by 100 basis points to 11.75%, and has indicated that it will raise it even higher in the coming period. The forint reacted favorably to the rate hike, with the EUR/USD exchange rate falling below 400.

The fund posted a negative return in August, but outperformed its benchmark index. In August, we reduced our exposure to China and the commodity exposure, and took profit on a Polish retailer. On a sector level, the best performing sectors were uranium, emerging internet, commodities, and renewable energy. On the downside, large technology companies, which have performed well so far, underperformed in August. The upside benefit of buying trends by the fund could be high in the coming period, so we will use the current favorable pricing levels that are being formed by corrections to buy. At the end of the month, the fund's equity exposure was 93% against the benchmark index.
