

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

In September, year-on-year inflation have risen to around 19%. The normal inflation data released by the KSH will already include the change in the rationing in September, but the HICP data already showed the impact of the measure in August. Inflation could rise further in the last quarter, peaking in early 2023. In September, after a one-off 125 basis point rate hike, the central bank, to the surprise of the market, announced that it would end the cycle of rate hikes, leaving the policy rate at 13% from September. At the press conference following the meeting, the importance of the liquidity tightening measures that had already been introduced was stressed. In addition to the increase in the reserve requirement ratio, the central bank will hold regular auctions of discount bonds and a long-term deposit facility will be introduced from October. Details will be available in early October, but all are aimed at tightening interbank liquidity. The base rate is no longer planned to be raised, but the liquidity tightening measures could raise the effective interest rate within the policy band. The annual budget deficit target was also revised during the month. Despite the government's strong adherence to the 4.9% deficit target so far, the target for this year was raised to 6.1% at the end of September. As a result, bond yields continued to rise in September, with a rise of 40 basis points for the 3-year maturity, 33 basis points for the 5-year maturity and 85 basis points for the 10-year maturity. The valuation of domestic paper is still favorable by regional standards. The budget balance deteriorated slightly again in August, bringing the balance to 94% of the full-year deficit target. The change in the utility cuts will improve the budget balance, but approval of EU funds would be important to reach the 6.1% deficit target. The sell-off in developed markets did not help international sentiment, but we turned positive on the asset class as the rate hike cycle ended.
