

## INVESTMENT POLICY OF THE FUND

The objective of the Fund is to provide capital return for the investors within the appropriate risk limits. The aim of the Fund is to achieve the highest possible return for a given risk level by buying undervalued stocks and fixed income assets and selling overvalued instruments. The Fund is allowed to buy shares, bonds and other instruments, to open short positions on the spot market, to take long and short forward and future positions. Moreover, the Fund can trade on the option market. The portfolio of the

Fund is separated into three classes according to their investment objective: Instruments of the first class consist of long positions of long term, fundamentally undervalued, and short positions of overvalued equities. The method of stock picking is identical with the applied methods of Aegon equity related funds and mainly concentrate to the CEE regional markets, although the Fund is allowed to invest in other emerging and developed market instruments. The second class of the Fund's instruments implement the top-down equity strategy of Aegon Asset Management Co., mainly with long and short positions on the futures markets. These positions are based on the scores of the so-called "quadrant model", which is the internal asset allocation model of the Asset Management Company. Instruments of the third class involve the fixed income part of the Fund. The aim of the third class is to reach or exceed the performance of the RMAX Index. The target weight of the first and second classes altogether is 45%.

## MARKET SUMMARY

In September, inflation and other macro data prompted the US Federal Reserve to raise its benchmark interest rate by a further 75 basis points to 3.25%, and policy makers forecast further increases of 75-50-25 basis points. Rising US interest rates, which only further strengthen the dollar in the currency markets, have become a source of serious problems in the international financial markets. Japan's finance ministry has intervened in the foreign exchange market for the first time in 24 years, and the UK central bank will be forced to buy bonds at L5bn a day for 13 days, while postponing its QT program, which was due to start in October and would have involved selling L80bn of assets. The big question for the period ahead is when the US Federal Reserve will stop raising interest rates, but this is unlikely to happen until macro data starts to weaken.

The higher than expected inflation data in Europe, which in some center states such as the Netherlands showed a significant almost annual 14%, left the ECB with no choice but to raise the base rate by 75 basis points and the market expects another 50 basis point increase in October.

Inflation remains a major concern in Hungary. According to the latest MNB Inflation Report, inflation is expected to peak in the 19%-22% range, but it is not ruled out that it will be above 22 percent. The big spike could come as early as September due to the increase in the public utility bill and the summer drought. In September, the central bank raised the base rate further by 125 basis points to 13%. The forint weakened to a new low against the euro when it crossed the 420 level.

The fund posted a negative return in September. The fund's equity weighting remains unchanged at 14%. The negative performance was largely due to Hungarian bond exposure and the HUF hedging. In September, we gradually increased the fund's interest rate risk. It is now 2 years in Hungarian bonds and 3 years for the fund as a whole. We have kept Ukrainian bonds unchanged, but this exposure has had no impact on the fund's returns. On the equities side, we have bought shares in the more defensive companies in the region. Commodity exposure remained unchanged at 1.00% in the fund. Our strategic view is that economies are approaching a recessionary phase, so we have continued to increase bond exposure and within bonds we are mainly positive on the Hungarian market.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 3.5%
ISIN code:	HU0000714936
Start:	10/06/2015
Currency:	HUF
