

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In September, year-on-year inflation have risen to around 19%. The normal inflation data released by the KSH will already include the change in the rationing in September, but the HICP data already showed the impact of the measure in August. Inflation could rise further in the last quarter, peaking in early 2023. In September, after a one-off 125 basis point rate hike, the central bank, to the surprise of the market, announced that it would end the cycle of rate hikes, leaving the policy rate at 13% from September. At the press conference following the meeting, the importance of the liquidity tightening measures that had already been introduced was stressed. In addition to the increase in the reserve requirement ratio, the central bank will hold regular auctions of discount bonds and a long-term deposit facility will be introduced from October. Details will be available in early October, but all are aimed at tightening interbank liquidity. The base rate is no longer planned to be raised, but the liquidity tightening measures could raise the effective interest rate within the policy band. In addition to the 3-month and 12-month auctions, the central bank has also introduced a 6-month Treasury bill auction, helping to bring short yields in line with the base rate. The average yield on the 3-month Treasury bill auctions thus rose from 9.73% at the beginning of the month to 11.29% by the end of the month. The average yield on the 6 and 12-month auctions, on the other hand, rose to around the base rate. We continue to favor holding shorter-dated paper in the fund until inflation peaks, but we have started to open up to longer-dated paper as the tightening cycle comes to an end.
