

INVESTMENT POLICY OF THE FUND

The objective of the fund is to get a share of the yields of the Russian equity market, and to benefit on the Russian economy growth through equity rates and dividends incomes. In accordance with the risk features of the equity investments, the fund is considered as a high-risk investment. According to the intentions of the Fund Manager, the portfolio of the Fund is predominantly formed by equities publicly issued by foreign companies. Primary targets of investment are the equities of companies listed on the stock that operate in Russia or countries of the former Community of Independent States or make most of their revenues in those countries. When establishing the portfolio, the equities determine the nature of the fund, so the ratio of equities in the fund may reach the legal maximum at the time. The fund registers its assets in Hungarian Forint. The Fund Manager is entitled to cover part of all the currency risks with forward currency positions, while complying with the effective legal provisions.

MARKET SUMMARY

The Fund Manager has completed the conversion of the depositary receipts in the Fund into local market shares, thus the proportion of GDRs in the Fund has decreased significantly. The Fund Manager has completed the conversion through the custodian in all possible cases, and after the conversions there still remain 4 shares that are not registered in the Russian local market: Magnit, Phosagro, X5 and Yandex. The latter is not a depositary receipt but a Nasdaq listed share.

For friendly non-resident investors, the market opened on September 12th, in line with the preliminary indications. As previously reported, access to the converted or Russian local market shares will theoretically be available after the opening of the market for foreign investors, on which the Moscow Stock Exchange has published a detailed presentation. Only foreign investors will be able to trade on this platform, and the proceeds from the sale will be placed in a so-called "S-account". The funds credited to the "S" account are restricted, cannot be freely used for investment or repatriated (converted into other currencies), and are conditional claims that can only be used under the conditions set by the Russian state at any given time. Although the first days of trading have shown a positive picture, but due to the limited access, this does not give any indication of the market value of Russian securities. The number of companies on the list of strategic companies has not changed over the past month. According to the presidential decree, only investors from 'friendly' countries and majority-owned foreign companies are allowed to trade in these companies, while investors from 'non-friendly' countries, including Hungarian investors, are expected to be banned both this year and the next.

The sanctions remain in force and the net asset value of the Fund's series cannot be determined. The Fund Manager's access to the Russian equity markets is still not guaranteed and therefore no sale or redemption of units can be made. Therefore, the conditions for resuming continuous trading are still not met.
