

## INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY

At its first policy meeting in 2023 the US Federal Reserve raised its benchmark interest rate by 25 basis points, as expected, and at the subsequent press conference, Fed Chairman Jerome Powell promised a more cautious stance than before and a stand-alone decision making process at every FOMC meeting in the future. Powell said he expected the interest rate path to peak higher than expected now, while acknowledging and giving credibility to the fact that inflation in many sectors is falling, a disinflationary process has begun. He expects wages to fall, but does not think this will lead to a meaningful recession. A return to the 2 percent inflation target will require a rebalancing of the labor market, i.e. some rise in unemployment. Powell also said that over-tightening is not the goal and that the tools are there to deal with it. One of his most interesting statements was that he talked about a tightening of financial conditions when these indicators have been at a loose level for several months. This was interpreted by many as Powell not being interested in the latter, not being bothered by the fact that equity prices have rallied. All in all, the previous harsh rhetoric was replaced by a balanced communication from the central bank, leaning towards the possibility of soft-landing.

In Hungary, inflation remains very high. According to the official KSH bulletin, inflation was 24.5% in January. Although the MNB did not raise the base rate in January, it did so implicitly. It raised the banks' required reserves, thus taking money out of the economy, but more importantly, the 18% interest rate on the weekly MNB tender is now available to financial institutions too. This has had a very positive effect on the forint exchange rate, which is now consistently below the 390 level against the euro. Although Hungary has been downgraded by two credit rating agencies, it has not been able to weaken the forint.

The Fund achieved a positive return in January. During the month, we reduced the Fund's interest rate risk by selling some 10 and 30 year bonds and replacing them with 2-3 year government and corporate bonds. The book yield remained 10% in the fund. The forint position is at neutral level, this will be changed if it goes below 380 or above 420 against the euro. We continue to hold small cap Hungarian equities, our view is that Hungarian and regional stocks are extremely undervalued relative to other markets.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 2.9%
ISIN code:	HU0000708318
Start:	11/17/2009
Currency:	PLN
Net Asset Value of the whole Fund:	31,251,923,912 HUF
Net Asset Value of B series:	43,061,029 PLN
Net Asset Value per unit:	2.626595 PLN
