

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

At its first policy meeting in 2023 the US Federal Reserve raised its benchmark interest rate by 25 basis points, as expected, and at the subsequent press conference, Fed Chairman Jerome Powell promised a more cautious stance than before and a stand-alone decision making process at every FOMC meeting in the future. Powell said he expected the interest rate path to peak higher than expected now, while acknowledging and giving credibility to the fact that inflation in many sectors is falling, a disinflationary process has begun. He expects wages to fall, but does not think this will lead to a meaningful recession. A return to the 2 percent inflation target will require a rebalancing of the labor market, i.e. some rise in unemployment. Powell also said that over-tightening is not the goal and that the tools are there to deal with it. One of his most interesting statements was that he talked about a tightening of financial conditions when these indicators have been at a loose level for several months. All in all, the previous harsh rhetoric was replaced by a balanced communication from the central bank, leaning towards the possibility of soft-landing.

In Hungary, inflation remains very high. According to the official KSH bulletin, inflation was 24.5% in January. Although the MNB did not raise the base rate in January, it did so implicitly. It raised the banks' required reserves, thus taking money out of the economy, but more importantly, the 18% interest rate on the weekly MNB tender is now available to financial institutions too. This has had a very positive effect on the forint exchange rate, which is now consistently below the 390 level against the euro. Although Hungary has been downgraded by two credit rating agencies, it has not been able to weaken the forint.

The fund achieved a positive return in January. The environment was good for growth stocks in January. Expectations for interest rate hikes were lowered, which was a significant help for the growth sector. Among our individual exposures, Ali Baba, Plug Power, and Allegro performed the best. At the sector level, commodity scarcity related to energy transformation, emerging market internet, renewable energy and A.I. and robotics performed well. We reacted in time to the hype around artificial intelligence in the fund and were able to benefit significantly during January. We also took some exposure to the European travel and leisure and the European luxury goods sectors at the beginning of January, which were indirectly good proxies for the opening in China. In addition, we also took positions in the social media sector, which we hated last year, which also proved to be a good decision. In 2023, the EPS growth margin of growth stocks versus value stocks will widen significantly as pricing has normalized since the epidemic and usually in periods of low economic growth investors look for structurally sound growth themes. The fund is at 92% against the benchmark.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	100% MSCI AC World Daily Total Return Net USD Index
