ISIN-code: HU0000715990

You are about to buy a product that is complex and may be difficult to understand.

Manufacturer: VIG Asset Management Hungary Closed Company Limited by Shares, VIG Group

Date: 5/16/2023

Website: <https://www.vigam.hu>

Call 06-1-477-4814 for more information!

VIG Asset Management Hungary Closed Company Limited by Shares is supervised by the **National Bank of Hungary** with respect to this document containing key information.

What is this product?

Type: public, open-ended, harmonised in accordance with the UCITS Directive.

Currency of the series: American Dollar (USD)

Benchmark: The benchmark return applied is a minimum return target, which does not mean an actual promise regarding the yield. The benchmark return for the Fund's these series is 0,0% per annum. **Turn:** The fund has an indefinite term, and does not expire, so the investment fund shares can be redeemed at any time.

Objectives: The Fund is an absolute return investment fund that aims to create an investment portfolio through active portfolio management that achieves a return for its clients in excess of the benchmark, taking into account a predetermined risk profile. It intends to accomplish this goal primarily by investing in the bond and equity market of the emerging European region. The Fund's asset allocation is aligned with the given capital market conditions.

The Fund is willing to buy or sell all eligible investment instruments – domestic and foreign bonds, equities and other securities, indices and currencies – where it sees a major profit opportunity in doing so. In this respect, the Fund is opportunistic and should be classified among multi-strategy funds in terms of its approach.

In the scope of the multi-strategy, the Fund is dominated mainly by “Global macro”, “Long-short equity”, “Convertible bond arbitrage” and “Managed futures” type transactions. The Fund's investments can be divided into three large groups by asset class: they assume additional risk in the bond, forex, and stock market, respectively, and are willing to take both buy and sell positions in these markets, even up to the maximum amount allowed by law, which makes double leverage possible for the Fund. To the extent set out in the investment strategy, the Fund may also invest in so-called non-investment grade securities, which represent additional risk compared to assets that are classed as investment-grade in terms of creditworthiness. In its investment decision-making mechanism, the Fund considers and weighs fundamental, pricing, technical and behavioural/psychological factors.

The Fund Manager manages the manner of utilisation of the Fund's resources and the investment ratios with the maximum diligence that can be expected of it, at its own discretion, in compliance with the relevant laws and the limitations set out in this Management Regulation, in order to ensure that the Fund can achieve its goals in the long term, depending on the future risks and returns matching the Fund Manager's expectations. To ensure liquidity, the Fund wishes to keep the government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. No individual investor's decisions can be made in the Fund. The Fund Manager minimises the currency risk of the Fund's currency series against the base currency by means of foreign exchange futures allocated only to this series. The Fund Manager aims to keep the hedge ratio as a proportion of the asset value of the given series at between 90% and 110%, which is classified as an effective hedge. There is no possibility for making individual investor decisions in respect of the Fund.

Yield, yield payment: The Fund does not pay yield against the capital growth, and the entire capital growth will be reinvested in accordance with the Fund's investment policy. Investors can realise the capital growth as the difference between the purchase and redemption prices of the Investment Fund Shares they own, as a price gain.

Information about sustainability: The Fund does not qualify as a financial product promoting environmental or social characteristics, or a combination of those characteristics, or a financial product intended to facilitate sustainable investment. (SFDR, Article 6)

Intended retail investor: in certain cases, this fund is not suitable for investors, who want to withdraw their money within the recommended retention period.

Az Termination of the Fund: The fund manager is obligated to terminate the public open-ended investment fund if the average equity of the fund is lower than twenty million forints over a period of three months. The rules concerning the termination of the Fund, the sale of the Fund's assets, and the disbursement of the estate are set out in Sections 75-79 of Act XVI of 2014 on Collective Investment Trusts and Their Managers and on the Amendment of Financial Regulations.

What are the risks and what could I get in return?

Risk indicator: The summary risk indicator provides guidance regarding the risk level of this product compared to other products. It shows the likelihood that the product will cause financial loss due to the movements of the markets or because

we are unable to pay you.

The summary risk indicator presents the risk/profit ratio of the product based on the summary of the market risk indicator calculated from past returns. Historic data are not necessarily reliable indicators of the future risk profile, however, so this may change over time. Not even the lowest risk category can be understood as a fully risk-free investment.

This product does not include protection against future market performance, so you may lose a part or all of your investment. If we are unable to pay the amount due to you, you may lose your entire investment.

The risk indicator assumes that you keep the product until the end of the recommended retention period (2 years). The actual risk may be significantly higher if you redeem the product earlier, and it is possible that you get back a lower amount. The product is classified into the third, medium-low risk class of the 7-tier risk scale, because it is not likely that bad market conditions during the implementation of the Fund's investment policy will affect the Fund's ability to pay you.

The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately.

The unfavourable, moderate and favourable scenarios presented are illustrations presenting the worst, average and best performance of the product – or prior to the launch of the product, the relevant benchmark – in the past 10 years. Future market developments may vary.

Investment: once 10.000 USD		1 year	2 years (recommended holding period)
Stress scenario	What you might get back after costs	6648 USD	6380 USD
	Average return each year	-33,51%	-20,12%
Unfavorable scenario	What you might get back after costs	8023 USD	8009 USD
	Average return each year	-19,76%	-10,5%
Moderate scenario	What you might get back after costs	10346 USD	10719 USD
	Average return each year	3,46%	3,53%
Favourable scenario	What you might get back after costs	12194 USD	11550 USD
	Average return each year	21,94%	7,47%

This table shows the amount of money you can get back at the end of the first year and at the end of the recommended holding period in accordance with the different scenarios, assuming that you invest 10.000 USD amount. The “unfavourable” scenario type reflects the most unfavourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The “moderate” scenario type reflects the average development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The “favourable” scenario type reflects the most favourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately. The numbers presented include all costs of the product itself (though they may not include all the costs that you may be paying to your consultant or distributor). The numbers do not take into account your personal tax situation, which may also influence the amount you get back. The stress scenario shows the amount you can get back from the invested capital in case of extreme market circumstances.

What happen if the Fund Manager is unable to pay?

The potential insolvency of the Fund Manager does not jeopardise the repayment of the investors' savings in the Fund. If, based on the contract between the investor and the VIG Asset Manager – as Head Distributor – or the investment service provider managing the securities account, the VIG Asset Manager or the contracted service provider is unable to release to the investor the security held for the investor, the Investment Protection Fund (by its Hungarian abbreviation: “BEVA”) undertakes to be liable for indemnification. BEVA's indemnity obligation will become effective if the Supervisory Authority initiates liquidation proceedings against the BEVA member based on the law, or a court orders the liquidation of the BEVA member. The insurance provided by BEVA will not cover losses arising from the change of value of the investment. BEVA will pay the claim of the investor entitled to indemnification for up to an amount of one hundred thousand euros (in aggregate per person and investment enterprise, i.e., per BEVA member). The rate of the indemnity to be paid by the Fund is one hundred percent up to an amount of one million forints, and is one million forints and ninety percent of the portion above one million forints in the case of claims exceeding one million forints.

What are the costs?

A The reduction in yield (RIY) shows the effect of the full cost paid by you on the investment yield that may be realised. The full cost includes one-time, continuous and incidental costs. The amounts presented here are the cumulative costs of the product itself projected to the end of the recommended holding period. The numbers are based on the assumption that you make a one-time investment of 10.000 USD. The numbers are estimates, and may vary in the future.

The Fund Manager will charge the Fund a performance fee (20%) calculated in accordance with the High-on-High model. Under this method, a performance fee can only be charged to the Fund if, since the last performance fee was charged, but at most in the last 5 years, the net return on the series has been higher than the benchmark

return. If there was no performance fee settlement in the 5 years prior to the given year, the traded price used for comparison purposes is the closing net asset value per unit of the series of the year 5 years prior.

Costs over time: investment once 10.000 USD	1 year	2 years (recommended holding period)
Total costs	299 USD	620 USD
Impact on return (RIY) per year	2,99%	2,99%

Composition of Costs The table below presents the annual effect on the investment return you may realise through the various cost types at the end of the recommended retention period, and the meaning of the different cost categories.

One-off costs	Entry costs	maximum 5,0%	The impact of the costs you pay when entering your investment. This is the total you can expect to be charged, the sales person offering you the product will inform you of the actual charge. For example, for a one-time 10.000 USD you invest, the cost is 500 USD.
	Exit costs	maximum 3,5%	The impact of the costs of exiting your investment. This is the total you can expect to be charged, the sales person offering you the product will inform you of the actual charge. For example, for a one-time 10.000 USD you invest, the cost is 350 USD.
Ongoing costs	Portfolio transaction costs	0,16%	The impact of the costs of us buying and selling underlying investment for the product. The actual amount varies depending on our buy and sell transactions.
	Other ongoing costs	2,09%	The impact of the costs that we take each year for managing your investments and the costs presented in Section II.
Incidental costs	Performance fees	0,73%	The impact of the performance fee (20%). We take these from your investment if the product outperforms its benchmark.

How long should I hold it and can I take money out early?

Recommended holding period: 2 years

The Product has no cooling-off or withdrawal period, as its term is indefinite being open-ended, i.e., it can be redeemed at any time. This Fund is not suitable for investors who intend to reclaim their money from the fund within the minimum recommended investment time. If any holder of the Investment Fund Share(s) places a redemption or conversion order for the investment fund shares of the same investment fund within 10 sales days of the time of the purchase or conversion order (T+10), the distributors will charge a penalty premium of 2% in excess of the regular premium, which will be paid to the Fund. The time interval required for the penalty premium to apply shall be determined based on the FIFO principle.

How can I complain?
