This document presents key information about this investment product. This document is not a marketing material. The provision of information is required by law, in order to help you understand the nature, risks and costs of this product, as well as the potential profit or loss that may be realised, and to compare the product with other products.

Product

Name of product: **VIG MEGATREND EQUITY INVESTMENT FUND series C**

ISIN-code: HU0000730320

You are about to buy a product that is complex and may be difficult to understand.

Manufacturer: VIG Asset Management Hungary Closed Company Limited by Shares, VIG Group

Date: 5/16/2023

Website: <https://www.vigam.hu>

Call 06-1-477-4814 for more information!

VIG Asset Management Hungary Closed Company Limited by Shares is supervised by the **National Bank of Hungary** with respect to this document containing key information.

What is this product?

Type: public, open-ended, harmonised in accordance with the UCITS Directive.

Currency of the series: Czech Koruna (CZK)

Benchmark: 100% MSCI AC World Daily Total Return Net USD **Turn:** The fund has an indefinite term, and does not expire, so the investment fund shares can be redeemed at any time.

Objectives: The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation.

The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro.

The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%.

The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. No individual investor's decisions can be made in the Fund.

Yield, yield payment: The Fund does not pay yield against the capital growth, and the entire capital growth will be reinvested in accordance with the Fund's investment policy. Investors can realise the capital growth as the difference between the purchase and redemption prices of the Investment Fund Shares they own, as a price gain.

Information about sustainability: The Fund does not qualify as a financial product promoting environmental or social characteristics, or a combination of those characteristics, or a financial product intended to facilitate sustainable investment. (SFDR, Article 6)

Intended retail investor: in certain cases, this fund is not suitable for investors, who want to withdraw their money within the recommended retention period.

Az Termination of the Fund: The fund manager is obligated to terminate the public open-ended investment fund if the average equity of the fund is lower than twenty million forints over a period of three months. The rules concerning the termination of the Fund, the sale of the Fund's assets, and the disbursement of the estate are set out in Sections 75-79 of Act XVI of 2014 on Collective Investment Trusts and Their Managers and on the Amendment of Financial Regulations.

What are the risks and what could I get in return?

Risk indicator: The summary risk indicator provides guidance regarding the risk level of this product compared to other products. It shows the likelihood that the product will cause financial loss due to the movements of the markets or because we are unable to pay you.

The summary risk indicator presents the risk/profit ratio of the product based on the summary of the market risk indicator calculated from past

returns. Historic data are not necessarily reliable indicators of the future risk profile, however, so this may change over time. Not even the lowest risk category can be understood as a fully risk-free investment.

This product does not include protection against future market performance, so you may lose a part or all of your investment. If we are unable to pay the amount due to you, you may lose your entire investment.

The risk indicator assumes that you keep the product until the end of the recommended retention period (4 years). The actual risk may be significantly higher if you redeem the product earlier, and it is possible that you get back a lower amount. The product is classified into the fourth, medium risk class of the 7-tier risk scale, because bad market conditions during the implementation of the Fund's investment policy may possibly affect the Fund's ability to pay you.

The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately.

The unfavourable, moderate and favourable scenarios presented are illustrations presenting the worst, average and best performance of the product – or prior to the launch of the product, the relevant benchmark – in the past 10 years. Future market developments may vary.

Investment: once 250.000 CZK		1 year	4 years (recommended holding period)
Stress scenario	What you might get back after costs	137250 CZK	52848 CZK
	Average return each year	-45,09%	-32,19%
Unfavorable scenario	What you might get back after costs	193194 CZK	182974 CZK
	Average return each year	-22,72%	-7,5%
Moderate scenario	What you might get back after costs	268537 CZK	318827 CZK
	Average return each year	7,41%	6,26%
Favourable scenario	What you might get back after costs	404840 CZK	397436 CZK
	Average return each year	61,93%	12,28%

This table shows the amount of money you can get back at the end of the first year and at the end of the recommended holding period in accordance with the different scenarios, assuming that you invest 250.000 CZK amount. The "unfavourable" scenario type reflects the most unfavourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The "moderate" scenario type reflects the average development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The "favourable" scenario type reflects the most favourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between September 2012 and September 2022. The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately. The numbers presented include all costs of the product itself (though they may not include all the costs that you may be paying to your consultant or distributor). The numbers do not take into account your personal tax situation, which may also influence the amount you get back. The stress scenario shows the amount you can get back from the invested capital in case of extreme market circumstances.

What happen if the Fund Manager is unable to pay?

The potential insolvency of the Fund Manager does not jeopardise the repayment of the investors' savings in the Fund. If, based on the contract between the investor and the VIG Asset Manager – as Head Distributor – or the investment service provider managing the securities account, the VIG Asset Manager or the contracted service provider is unable to release to the investor the security held for the investor, the Investment Protection Fund (by its Hungarian abbreviation: "BEVA") undertakes to be liable for indemnification. BEVA's indemnity obligation will become effective if the Supervisory Authority initiates liquidation proceedings against the BEVA member based on the law, or a court orders the liquidation of the BEVA member. The insurance provided by BEVA will not cover losses arising from the change of value of the investment. BEVA will pay the claim of the investor entitled to indemnification for up to an amount of one hundred thousand euros (in aggregate per person and investment enterprise, i.e., per BEVA member). The rate of the indemnity to be paid by the Fund is one hundred percent up to an amount of one million forints, and is one million forints and ninety percent of the portion above one million forints in the case of claims exceeding one million forints.

What are the costs?

A The reduction in yield (RIY) shows the effect of the full cost paid by you on the investment yield that may be realised. The full cost includes one-time, continuous and incidental costs. The amounts presented here are the cumulative costs of the product itself projected to the end of the recommended holding period. The numbers are based on the assumption that you make a one-time investment of 250.000 CZK. The numbers are estimates, and may vary in the future.

The measurement of the Fund's performance is linked to the Fund's designated benchmark index. The Fund pays a performance fee (20%) to the Fund Manager; the basis of the fee calculation is the return in excess of the Fund's benchmark index, the amount of the performance fee and the amount of the assets on which the return was achieved by the Fund Manager. The performance fee may be paid once a year, on the last distribution day of the year or upon the termination of the Fund, and only if the Fund's net return exceeded in the given period the return of the Fund's benchmark index over the five years preceding that or, if a performance fee was paid in the latter period, then since the last success fee was paid.

Costs over time: investment once 250.000 CZK	1 year	4 years (recommended holding period)
Total costs	7508 CZK	36237 CZK
Impact on return (RIY) per year	3%	3%

Composition of Costs

The table below presents the annual effect on the investment return you may realise through the various cost types at the end of the recommended retention period, and the meaning of the different cost categories.

One-off costs	Entry costs	maximum 5,0%	The impact of the costs you pay when entering your investment. This is the total you can expect to be charged, the sales person offering you the product will inform you of the actual charge. For example, for a one-time 250.000 CZK you invest, the cost is 12.500 CZK.
	Exit costs	maximum 3,5%	The impact of the costs of exiting your investment. This is the total you can expect to be charged, the sales person offering you the product will inform you of the actual charge. For example, for a one-time 250.000 CZK you invest, the cost is 8.750 CZK.
Ongoing costs	Portfolio transaction costs	0,11%	The impact of the costs of us buying and selling underlying investment for the product. The actual amount varies depending on our buy and sell transactions.
	Other ongoing costs	2,1%	The impact of the costs that we take each year for managing your investments and the costs presented in Section II.
Incidental costs	Performance fees	0,79%	The impact of the performance fee (20%). We take these from your investment if the product overperforms its benchmark.

How long should I hold it and can I take money out early?

Recommended holding period: 4 years

The Product has no cooling-off or withdrawal period, as its term is indefinite being open-ended, i.e., it can be redeemed at any time. This Fund is not suitable for investors who intend to reclaim their money from the fund within the minimum recommended investment time. If any holder of the Investment Fund Share(s) places a redemption or conversion order for the investment fund shares of the same investment fund within 10 sales days of the time of the purchase or conversion order (T+10), the distributors will charge a penalty premium of 2% in excess of the regular premium, which will be paid to the Fund. The time interval required for the penalty premium to apply shall be determined based on the FIFO principle.

How can I complain?

Orally: in VIG Befektetési Alapkezelő Magyarország Zrt's premises, customer services and contractual partners' premises open for customers, during their business hours: <https://www.vigam.hu/ugyfelszolgalati-irodak>, at the central phone number: +36 1 477 4814 (on business days, from 8 am to 4 pm; extended complaints reporting: Monday, 8 am to 8 pm), at the central customer service office: H-1091 Budapest, Üllői út 1.; phone: +36 1 477 4814; fax: 476-2030, order of customer service: only subject to preliminary appointment. **In writing:** in person or via an instrument submitted by proxy (see the place for oral complaints), via post – at the address H-1091 Budapest, Üllői út 1, or via email, at the address alapkezeslo@am.vig, by completing our complaint form available at our website (<https://www.vigam.hu/kapcsolatfelvetel-panaszbejelentes/#urlap>), or through the Online Dispute Resolution Platform: <http://ec.europa.eu/odr>
