

## INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY

The US Federal Reserve raised the benchmark US interest rate by 25 basis points to 5.25%. The last time it was at this level was in 2007. Recently, the Fed's policy of raising interest rates has been causing an upheaval. There are views that the Fed has already won the battle against inflation and should be more concerned with avoiding a severe recession in the US economy, but there are also counter-views that inflation could still be a threat and that the Fed should instead raise the base rate further to avoid making the mistake that the then Fed leadership made in the late 1970s. Based on current communication, market expectations and the FOMC policymakers' views are quite divergent, with the latter ruling out a wave of rate cuts in the autumn. In Hungary, although falling, inflation remains very high. According to the official KSH release, inflation was 25.2% in April, 0.2% lower than the previous month. At the end of April, the MNB slightly changed its interest rate policy. It kept the overnight bank deposit at 18%, but brought the top of the interest rate corridor down to 20.5%. This did not really change anything, but was rather symbolic. Barnabás Virág, the deputy governor of the Hungarian national Bank, justified the change by saying that "the extreme risk scenarios have been priced out", meaning that the financial situation is much better than last autumn, when the extremely wide interest rate corridor was introduced. Let us not forget that foreign investors still have access to the MNB's 18% weekly deposit, which makes the forint very attractive. The forint did not weaken on this news of the band cut and was trading around the 375 level against the euro at the end of the month.

The Fund achieved a positive return in April. During the month we further increased the equity weighting of the fund to 18%. We increased the weight mainly by buying Hungarian equities. We see that the very low positioning in Hungarian equities is compounded by the very low valuation. The forint has strengthened a lot this year, long-term Hungarian interest rates have also come down significantly, but we have not yet seen a significant rise in equities. Therefore, we continue to hold Hungarian small cap stocks, our view is that Hungarian and regional stocks are extremely undervalued relative to other markets. On the bond side, we bought a euro-dominated bond of a Romanian bank, which 9.50% interest. We are holding the Hungarian bond position unchanged, we see that the Hungarian bond premium is high not only compared to Germany but also compared to the rest of the region. The Fund's book yield stands at 9.50%.

## GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Unicredit Bank Hungary Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 2.6%
ISIN code:	HU0000716006
Start:	03/17/2016
