

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

The ECB hiked by 50bp but did not provide any guidance on future moves. The US inflation report flagged strong inflationary pressure for households, while US producer prices signalled easing pressure is coming in. As a result, the Fed increased interest rates by 25bp and signalled it is likely almost done with rate hikes. However, Fed Chair Jerome Powell reiterated that no FOMC participant sees rate cuts this year in their baseline. The BoE, SNB and Norges Bank all raised rates further. The Eurozone composite PMI surprised to the upside, reflecting a strong improvement in services activity while the manufacturing sector remains weak. European banking regulators clarified that shareholders would continue to bear losses before holders of AT1s if crisis intervention is needed. Eurozone inflation for March eased to 6.9%, its lowest level since February 2022, while core inflation edged up to 5.7%. Firming risk sentiment has been a key driver across assets. Sovereign yields were up, with EGBs under stronger selling pressure at the end of the month, especially at the short end of the curve, due to sticky core inflation. EUR-USD rose above 1.09, while the JPY weakened further. Equities were generally up, and implied volatility declined. Corporate and bank credit spreads moved sideways, with some tightening among high-beta names. The fund still keeps its Ukrainian exposure, and waits for improvement in the Ukrainian-Russia war; we closed short positions in the long-end of the German curve, bought medium-term US government bonds with the further intention to raise exposure to the core rates markets while decreasing Hungarian risk.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	Hurdle rate, annual 0%
ISIN code:	HU0000727037
Start:	09/14/2021
