

INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Russia, Turkey), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

As expected, the US fiscal crisis was resolved by the end of May. To an outsider, it was odd that such a thing could happen again after 2011, when everyone knew full well that the US would not declare bankruptcy. If it did, it would have unforeseen consequences that no one would dare risk.

The Fed raised the base rate by 25 basis points to 5.25%. The wording of the Fed's statement at the post-raise briefing was much the same as that used at the top of the rate hike cycle in 2006, deleting the phrase "FOMC expects further rate hikes to be necessary", but there was no mention of the possibility of easing, and the balance could still tip towards tightening.

In Hungary, although falling, inflation is still very high. According to the official KSH release, inflation was 24% in May, more than 1% lower than the previous month. What was different from previous months was that the National Bank lowered the top of the interest rate band from 25% to 19.50%. While the official base rate is 13% and the overnight 1-day rate is 17%, the lowering of the top of the band itself could be a guide for the months ahead. The MNB president said at the post-cut briefing that if inflation numbers continue to fall, a 100 basis point per month rate cut could be expected. The forint did not weaken much on the announcement, indicating that the market had already priced in the news. Let's not forget that foreign investors still have access to the MNB's 17% weekly deposit, which makes the forint very attractive. Let us also note that the forint yield is still significantly high compared to the surrounding countries.

The Fund achieved a negative return in May, but outperformed the benchmark index. The reason for the outperformance was that the Czech market was underweight, which proved to be a good decision, but also a couple of off-benchmark stocks performed very well in the fund. The Hungarian and Romanian markets also performed very well in May, which also helped the fund's performance. On a stock level, shares in Polish retail and video game companies decreased the fund's performance. On a country level, Hungarian and Romanian exposure is overweight, Czech underweight and Polish was underweight at the beginning of the month but moved to overweight by the end of the month. At the sector level, utilities are underweight, banks are down to benchmark levels, while retail is overweight. Overall, due to long-term positions, the Fund is overweight against the benchmark index at around 108%.
