

INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia, Russia, Turkey), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

MARKET SUMMARY

In March, the impact of the US central bank's interest rate hike policy can finally be felt. Silicon Valley Bank was forced to file for bankruptcy as the deposit withdrawals were so large that they could only be met by selling their portfolio, but as the bank's bond portfolio had been significantly priced down by the Fed's rate hikes, it did not have enough assets to meet these withdrawals. The Federal Reserve chairman still came out strongly in favor of another 50 basis point hike at his usual semi-annual Senate hearing, but the bank panics that have since emerged are likely to prompt policymakers to reconsider their earlier stance. According to Deutsche Bank, the Fed will raise interest rates by 4x25 basis points this year, which could peak at 5.75%, while Goldman believes that it will be raised by only 25 basis points. In Hungary, inflation remains very high. According to official data from the Hungarian Central Statistical Office, inflation was 25.4% in March, 0.3% lower than the previous month. In March, the Hungarian interest rate regime became chaotic again after the Ministry of Economy banned Hungarian financial institutions from accessing the one-week 18% bonds issued by the National Bank. This returned Hungary to a tiered interest rate regime. The base rate has remained at 13%, foreign financial institutions have access to the MNB's 18% bonds, while Hungarian financial institutions can only invest in the 14-15% Treasury bills. On hearing the news, the forint briefly weakened above the 400 level against the euro, but at the end of the month, when the base rate was left unchanged at the interest rate decision meeting and Vice President Barnabás Virágh communicated that they did not intend to cut rates for some time, the forint strengthened back to the 380 level.

The Fund achieved a negative return in March, but outperformed its benchmark index. The outperformance was due to the fact that we started the month underweight and used the banking crisis to buy. The banking underweight was closed out during the month. At country level in the region, all markets are overweight except for the Polish and Czech markets. The Polish market is at neutral, where we prefer smaller companies to large ones, and the Czech market is underweight. At sector level, real estate and consumer discretionary performed well, while energy and finance underperformed. Overall, the Fund is overweight against the benchmark index at around 109% due to long positions.
