

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

The pace of price increases in Hungary continued to slow in May. The year-on-year inflation rate was 21.5%, below market expectations of 22.3%. Food prices started to stagnate in April and this trend mostly continued in May with a month-on-month increase of 0.1%. At the May rate decision meeting, as expected, the Monetary Council began to normalize interest rates, with a first step of cutting the effective rate by 100 basis points, cutting the ON deposit rate to 17%. This also lowered the upper end of the interest rate corridor, with the ON rate now standing at 19.5%. With monthly cuts of 100 basis points, the base rate and the ON deposit rate could thus converge in September, after which the base rate is expected to remain at 13%. With the interest rates cut, the yield curve also moved lower during the month. Short yields in particular fell, with the 3-year yield ending the month 26 basis points lower. The long end of the yield curve was mixed, with 10-year yields up 17 basis points and 15-year yields down 24 basis points. The news at the beginning of June caused some renewed turbulence in the bond market. Two new elements were added to the 60% Hungarian government bond limit introduced earlier. Securities funds may invest up to 5% in debt securities other than HUF-denominated government bonds and must hold 20% of their liquid assets in Discount Treasuries. The measure led to a sharp increase in demand for Hungarian government securities at the beginning of the month, and thus to a significant fall in yields. The currently not very bright fiscal situation should thus start to improve in the coming months.
