

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

The pace of price increases in Hungary has slowed further in March. Although food price freezes might be kept until the end of April, more and more grocery stores are announcing price cuts on a number of food items. The dissipation of inflation according to our view will be a slow process, with a more rapid decline in the pace of price increases likely to start in the summer months. During the month the deposit rate freeze which was introduced at the end of last year was extended and financial institutions were restricted from accessing the discount bond issued by the Hungarian National Bank. This has once again damaged monetary transmission. At the March rate-setting meeting, the Monetary Council did not change the interest rate conditions, but stressed that maintaining the 18% rate could be justified for some time to come. With the end of the MNB discount bond, demand in T-bill auctions has increased. The 3-month auction sold at 14.9% at the end of the month, the 6-month auction at 15.21% and the annual T-bill auction at 14.56%. Interest rate risk in the fund continued to gradually increase during the month as inflation peaked.
