

INVESTMENT POLICY OF THE FUND

The Fund aims to profit from the returns on global equity market investments through stock prices and dividend income. According to the intentions of the Fund Manager, the bulk of the Fund's portfolio is made up of shares of foreign companies issued through public offerings, but the Fund may also invest in shares issued by Hungarian companies. The proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund Manager has the option, at its own discretion, of hedging all or part of its foreign exchange risks using forward currency positions subject to observing the applicable legal requirements.

MARKET SUMMARY

The US Federal Reserve raised the benchmark US interest rate by 25 basis points to 5.25%. The last time it was at this level was in 2007. Recently, the Fed's policy of raising interest rates has been causing an upheaval. There are views that the Fed has already won the battle against inflation and should be more concerned with avoiding a severe recession in the US economy, but there are also counter-views that inflation could still be a threat and that the Fed should instead raise the base rate further to avoid making the mistake that the then Fed leadership made in the late 1970s. Based on current communication, market expectations and the FOMC policymakers' views are quite divergent, with the latter ruling out a wave of rate cuts in the autumn. In Hungary, although falling, inflation remains very high. According to the official KSH release, inflation was 25.2% in April, 0.2% lower than the previous month. At the end of April, the MNB slightly changed its interest rate policy. It kept the overnight bank deposit at 18%, but brought the top of the interest rate corridor down to 20.5%. This did not really change anything, but was rather symbolic. Barnabás Virág, the deputy governor of the Hungarian national Bank, justified the change by saying that "the extreme risk scenarios have been priced out", meaning that the financial situation is much better than last autumn, when the extremely wide interest rate corridor was introduced. Let us not forget that foreign investors still have access to the MNB's 18% weekly deposit, which makes the forint very attractive. The forint did not weaken on this news of the band cut and was trading around the 375 level against the euro at the end of the month.

The Fund achieved a negative return in April, but outperformed the benchmark index. During the month we closed the SP500 index underweight as we see that the markets cannot fall on bad news for the time being. We opened a minimal tactical Nasdaq long position, but closed it before the quarterly report of large capitalization Nasdaq companies. Earlier in the month we bought shares in a German real estate company, but this suddenly rallied a lot, so we sold that as well. Our view on the markets is that fundamentals suggest that the realistic value of the stock market indexes would be about 10% lower, but technical factors are preventing the markets from falling. Until this situation changes, we will only take short-term tactical positions in the fund.
