

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In March, the impact of the US central bank's interest rate hike policy can finally be felt. Silicon Valley Bank was forced to file for bankruptcy as the deposit withdrawals were so large that they could only be met by selling their portfolio, but as the bank's bond portfolio had been significantly priced down by the Fed's rate hikes, it did not have enough assets to meet these withdrawals. The Federal Reserve chairman still came out strongly in favor of another 50 basis point hike at his usual semi-annual Senate hearing, but the bank panics that have since emerged are likely to prompt policymakers to reconsider their earlier stance. According to Deutsche Bank, the Fed will raise interest rates by 4x25 basis points this year, which could peak at 5.75%, while Goldman believes that it will be raised by only 25 basis points. In Hungary, inflation remains very high. According to official data from the Hungarian Central Statistical Office, inflation was 25.4% in March, 0.3% lower than the previous month. In March, the Hungarian interest rate regime became chaotic again after the Ministry of Economy banned Hungarian financial institutions from accessing the one-week 18% bonds issued by the National Bank. This returned Hungary to a tiered interest rate regime. The base rate has remained at 13%, foreign financial institutions have access to the MNB's 18% bonds, while Hungarian financial institutions can only invest in the 14-15% Treasury bills. On hearing the news, the forint briefly weakened above the 400 level against the euro, but at the end of the month, when the base rate was left unchanged at the interest rate decision meeting and Vice President Barnabás Virágh communicated that they did not intend to cut rates for some time, the forint strengthened back to the 380 level.

The price of the Premium portfolios rose in March. Asset class performance in forint terms showed a co-movement, with developed and regional long bonds closing with positive performance, similar to equity markets. The Central and Eastern European region underperformed the major equity markets. In line with the yield environment the money market exposures closed in positive territory. Cyclical commodity prices fell on shaken confidence in the banking sector, but gold prices appreciated significantly, with the latter realizing a profit on their short-term tactical transactions. In March, absolute return funds held by portfolios generated positive returns. As a result of the bans the sale of the very low weighted exposure to the Russian equity market held by the funds was not possible during March. Equities remain underweight, but at the end of the month we made a tactical decision to slightly increase the risk level, increasing the weighting of developed and regional equity markets on the equity side and extending the duration on the bond side.

GENERAL INFORMATION

Fund Manager:	AEGON Hungary Fund Manager Ltd.
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	AEGON Hungary Fund Manager Ltd.
Benchmark composition:	The fund has no benchmark
ISIN code:	HU0000716113
Start:	03/07/2016
Currency:	HUF
Net Asset Value of the whole Fund:	2,621,458,948 HUF
Net Asset Value of A series:	2,621,458,948 HUF
Net Asset Value per unit:	1.321925 HUF
