

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

Disinflation continued in Hungary in June, as headline inflation fell to 20,1%. As expected, the Monetary Council cut the ON deposit rate by another 100 basis points at its June policy meeting, to 16%. The inflation forecast published in the June Inflation Report has been slightly revised, with the forecast range for this year's inflation narrowed to 16.5%-18.5% and next year's inflation forecast slightly upwards, with the rate of increase expected to be between 3.5%-5.5% in 2024. At the beginning of June, the government issued another investment decree, requiring all bond, equity and mixed funds to hold at least 60% of their assets in securities and to invest at least 20% of their liquid assets in discount treasury bills issued by the Hungarian government. This already pushed short yields massively lower. At the same time local banks started to purchase the 4-5-year segment of the curve after another law amendment promised a significant reduction of the banking tax if banks hold more government bonds on their books. The new legislations have had a significant impact on the yield curve. 3-5 year yields decreased by 90 bps while 15-20 year yields fell by only 20 bps making the curve less inverted.
