

INVESTMENT POLICY OF THE FUND

The objective of the fund is to offer to the investors calculable investment yields at low risk. The Fund Manager may exclusively invest its fund assets in bond-type assets, mainly securities issued or guaranteed by the Polish State. Furthermore, the Fund may to a limited extent invest in debt and equity securities issued or guaranteed by the European Union, or its organization, the European Central Bank or the European Investment Bank, provided that its credit rating is at least equal to that of the Polish state and is denominated in Polish zloty. Weighted average remaining duration of the assets in the portfolio of the Fund may not exceed 6 months, and the weighted average remaining life of the assets may not exceed 12 months. In addition, the remaining term of the individual securities can be no more than years, or 397 days until the next interest determination date. For the sake of liquidity, the Fund may keep its financial assets in form of bank deposit, as well. Assets of the Fund are 100% denominated in Polish zloty. Aegon Polish Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Polish Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Polish Moneymarket Fund is capable of fluctuation. Aegon Polish Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In June Polish bond market had a moderately positive performance, yields decreased along the yield curve. Two-year yields decreased by 15 basis points, but 10-year yields also managed to end the month almost by 30 basis points lower. According to preliminary data, headline CPI in June decreased to 11,5% from May's 13% (YoY), and also came in below market expectations (consensus was 11,8%), mainly driven by fuel, food and energy. High frequency data in June confirmed that economic activity in Poland kept falling but at a slower rate than in April: slowdown is significant, but so far a deep recession is not expected by analysts. The Polish central bank kept the base rate at 6.75% but propability for a possible rate cut(s) increased recently. However, new round of fiscal loosening, strong labour market and elevated and slowly sliding core inflation limit the room for monetary easing. Premature rate cuts in Poland might mean that it will take a very long time for inflation to return to target: models show that core inflation may stabilise around 5% YoY in 2024-25 in that case. Most probably we may see a possible rather symbolic rate cut by 25bps this year around November, but we see a possible risk for quicker (already in September) and deeper rate cuts.
