

INVESTMENT POLICY OF THE FUND

The fund aims to profit from global megatrends that extend beyond economic cycles. Such trends may include demographic changes (ageing society, developing markets), efficiency gains due to scarce resources (renewable resources, energy efficiency), urbanisation, or even technological innovation. The fund aims to achieve its objectives through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Megatrends are long-term changes that have a lasting impact on our social and economic environment. The fund aims to share in the profit growth of companies that could be winners in these processes. Megatrends are long-term processes that extend beyond normal economic cycles, are usually global and affect the whole world. Consequently, the fund does not have a geographical specification. As the fund aims to profit from long-term growth and has significant exposure to stock markets, it is recommended for risk-taking investors with a long-term investment horizon. The Fund holds its assets in euro. The Fund invests only in investments where the expense ratio remains below 2.5%, but always aims to keep the average fees charged on the underlying collective investment instruments below 1%. The fund also does not have a geographical specification, and thus no typical currency composition. The target currency of the Fund is therefore the settlement currency of the benchmark index (USD). Due to the strategy of the Fund, it may also invest in assets denominated in foreign currency. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency, i.e. the settlement currency of the benchmark (USD). The Fund Manager has a discretionary right to reduce the foreign currency risk of positions denominated in a currency other than the target currency, depending on market developments, by entering into hedge transactions. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio.

MARKET SUMMARY

Global growth is running below-trend this year but considering the size and extent of recent headwinds (real rate shock, monetary tightening) is holding up relatively well. Underneath this resilient global picture there continues to be a marked divergence between strong services and weak manufacturing sectors. As a result, manufacturing-intensive economies like China and Germany are struggling while more services-based ones like the United States are outperforming. We still see a disinflationary environment. While goods inflation has fallen notably, services inflation is still running high across a wide range of economies.

The Fund achieved a positive return in July. Last month we saw a further broadening of the market rally, with not only the seven largest technology companies pulling the market higher, but value stocks such as energy and financials even outperformed (in these traditional industries, the MegaTrend Fund is underweight due to its structured growth strategy). Among the Fund's investments, our best performing stocks were those related to artificial intelligence, e-mobility and social media. In contrast, our agribusiness companies and healthcare exposure held within the ageing society theme underperformed. We increased the weight of innovative healthcare companies in the fund during the month, such as Eli Lilly, whose products recently achieved new breakthroughs in slowing the progression of Alzheimer's disease. We also selectively bought chipmaker companies that could be beneficiaries of the artificial intelligence story. We also took a slight profit on our holdings in the luxury goods sector after weaker than expected macro data from China. The Fund holds a 95% equity weight at the end of the month.
