

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

In July Polish bond market had a positive performance, yields decreased along the yield curve. Two-year yields decreased by 40 basis points, but 10-year yields also managed to end the month almost by 33 basis points lower. According to preliminary data, headline CPI in July decreased to 10.8% from June's 11.5% (Yoy), and also came in below market expectations (consensus was 11%). It was the softest reading since February 2022, mainly due to the slowdown in prices of food particularly in this month, but generally also due to fuel and energy. The Polish central bank kept the base rate at 6.75% but chances are increasing that they will start the rate cut cycle after summer. A Bloomberg poll in July put annual growth at 0.9% this year and the economy could expand by 2.7% next year. The purchasing managers' index declined in July, with the manufacturing index decreasing to 43.5 from 45.1 the previous month. The index is thus still below the 50 mark, as output and new orders are still falling due to the uncertain economic environment and high inflation. Industrial production fell 1.4% in May, and it was better than the market expectations of -1.6%. As for public finances, the state generated a surplus of PLN 8,169.24 million in June, increasing the 12-month rolling budget deficit to 1,62% of GDP. Our Fund performed positively in this month both in absolute and relative terms, despite with turned more cautious on Polish government bonds and valuation and rate cut expectations became quite stretched, our carry assets outperformed.
