

## INVESTMENT POLICY OF THE FUND

The Fund aims to share in the returns of the Polish stock market, and to profit from Polish economic growth through stock prices and dividend income. In accordance with the risk characteristics of equity investments, the Fund qualifies as a high-risk investment. According to the Fund Manager's intentions, the bulk of the Fund's portfolio is made up of the shares of foreign companies issued through public offerings. The primary investment targets are the securities, traded on the stock exchange or about to be listed on the stock exchange, of companies that operate in Poland or that derive a significant portion of their revenues from Poland, or whose shares are listed on the Warsaw Stock Exchange. The Fund may also invest in equities of other Central and Eastern European companies (Austria, Czech Republic, Hungary, Russia, Romania and Turkey). When developing the portfolio, the shares determine the nature of the Fund, and thus the proportion of shares that can be held in the Fund at any given time may reach the prevailing legal maximum. The Fund holds more than 30% of its assets in currencies other than the local currency (HUF).

## MARKET SUMMARY

Global growth is running below-trend this year but considering the size and extent of recent headwinds (real rate shock, monetary tightening) is holding up relatively well. Underneath this resilient global picture there continues to be a marked divergence between strong services and weak manufacturing sectors. As a result, manufacturing-intensive economies like China and Germany are struggling while more services-based ones like the United States are outperforming. We still see a disinflationary environment. While goods inflation has fallen notably, services inflation is still running high across a wide range of economies.

Az Alap júniusban ismét jelentősen, több mint 7%-al tudott emelkedni lengyel zlotyban, ami nagyjából megfelelt a referencia index teljesítményének. A legjobban ezúttal a közmű cégek teljesítettek (PGE, ENEA, Tauron), a szénészkek leválasztásával kapcsolatos pozitív hírek következtében, ami ezek alulsúlya miatt nagyobb aluteljesítést eredményezett az Alapban a lengyel indexel szemben. Ezt azonban sikerült nagyrészt kompenzálni az Alap más szektorokban lévő, többnyire a benchmarkban nem szereplő egyedi befektetéseit, főként a lengyel közepes kapitalizációjú vállalatok jó teljesítménye következtében. Az Alap 105%-on áll a referencia indexszel szemben.
