

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

Data from early August show that US labor market demand has already slowed in a number of sectors, with wage growth remaining strong. However, the macro data so far show no signs of deterioration, with the Atlanta Fed raising its latest third quarter GDP growth estimate from 5 to 5.8 percent on good housing and industrial production data, which has also pushed yields higher, with the 10-year US Treasury rising to levels not seen since 2007. The FOMC's latest meeting suggests that monetary policymakers still see "significant upside risks to inflation" and may therefore consider further rate hikes necessary. FED Chair Jerome Powell's Jackson Hole speech at the end of the month seemed austere, but statements such as "caution may be the way forward" indicate that the Fed will not raise rates unless the inflation trend worsens, leaving the option of raising rates for a worse scenario. In Hungary, the MNB continued to cut interest rates. The policy rate is now at 14% and could converge to the base rate in September. Thereafter, the base rate may also be cut, but this will require a continuation of decline in inflation. It is noteworthy that, in contrast to previous rate cuts, the forint has not weakened against the euro, but has risen to a one-month high of 379 forints to 1 euro by the end of the month.

The Fund achieved a positive return in August. We did not change the the bond positions' interest rate risk, but repositioned it a little. 1/3 of the exposure is in foreign currency bonds, which is hedged, the rest is invested in short-term Hungarian treasury bills. During the month, we reduced the equity weighting. We sold the shares we bought during the banking crisis in March, so the equity weight is already below 10%. But we also hedged this 10% by selling index futures, so the net equity exposure is 0. On the foreign exchange side, we keep 25% of the fund in positions that will benefit from the weakening of the HUF. Overall, the Fund's risk profile has further decreased, we have high liquidity, as we expect higher volatility in the second half of the year, where we hope to be able to increase the Fund's risk exposure at much better levels.

GENERAL INFORMATION
