

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to achieve a return in excess of the benchmark index through the positions it takes and the exchange rate movements. The Fund seeks to choose from the different investment schemes with the greatest possible freedom and without any industry or geographical specification. By monitoring global economic trends, the Fund tries to identify medium-term trends and themes – such as inflation or deflation, globalisation or deglobalisation – that may play an important role in shaping capital market movements over the Fund's investment horizon. Once these themes have been identified, the Fund will take positions that offer the expected return if these trends materialise. The Fund actively allocates money across different asset classes (equity / bond /foreign currency /commodity markets) and also within each asset class, depending on which assets or asset classes are most likely to benefit from the identified economic trends. The Fund, seeking to exploit a combination of medium- and long-term trends in various instruments, may buy or sell shares, bonds and other securities, or acquire long or short futures (stock-exchange) or forward (OTC) positions, and may also enter into options transactions. The Fund Manager selects investment instruments and adjusts their weighting, using its fundamental and technical analysis tools, in such a way that the Fund has the opportunity and scope to outperform the benchmark, with reasonable risk taking and appropriate diversification. The Fund does not designate a country, region or industry as its investment destination and its outlook is global. The Fund may, on occasion, have significant unhedged or other currency exposures.

MARKET SUMMARY

Data from early August show that US labor market demand has already slowed in a number of sectors, with wage growth remaining strong. However, the macro data so far show no signs of deterioration, with the Atlanta Fed raising its latest third quarter GDP growth estimate from 5 to 5.8 percent on good housing and industrial production data, which has also pushed yields higher, with the 10-year US Treasury rising to levels not seen since 2007. The FOMC's latest meeting suggests that monetary policymakers still see "significant upside risks to inflation" and may therefore consider further rate hikes necessary. FED Chair Jerome Powell's Jackson Hole speech at the end of the month seemed austere, but statements such as "caution may be the way forward" indicate that the Fed will not raise rates unless the inflation trend worsens, leaving the option of raising rates for a worse scenario. In Hungary, the MNB continued to cut interest rates. The policy rate is now at 14% and could converge to the base rate in September. Thereafter, the base rate may also be cut, but this will require a continuation of decline in inflation. It is noteworthy that, in contrast to previous rate cuts, the forint has not weakened against the euro, but has risen to a one-month high of 379 forints to 1 euro by the end of the month.

The fund achieved a positive return in August. On the commodity side, we increased the commodity weight by buying ETFs, but in addition, we also bought gold in several installments when it broke the 1950 level. On the stock side, we sold the Raiffeisen position when the share price fell below a certain level, and we realized a profit in the OTP and OMV positions. On the foreign exchange side, we bought EURHUF and USDHUF around the 380 and 351 levels respectively, so there is a 12% HUF short position in the fund. Bond positions were unchanged in August.
