

## INVESTMENT POLICY OF THE FUND

### MARKET SUMMARY

Data from early August show that US labor market demand has already slowed in a number of sectors, with wage growth remaining strong. However, the macro data so far show no signs of deterioration, with the Atlanta Fed raising its latest third quarter GDP growth estimate from 5 to 5.8 percent on good housing and industrial production data, which has also pushed yields higher, with the 10-year US Treasury rising to levels not seen since 2007. The FOMC's latest meeting suggests that monetary policymakers still see "significant upside risks to inflation" and may therefore consider further rate hikes necessary. FED Chair Jerome Powell's Jackson Hole speech at the end of the month seemed austere, but statements such as "caution may be the way forward" indicate that the Fed will not raise rates unless the inflation trend worsens, leaving the option of raising rates for a worse scenario. In Hungary, the MNB continued to cut interest rates. The policy rate is now at 14% and could converge to the base rate in September. Thereafter, the base rate may also be cut, but this will require a continuation of decline in inflation. It is noteworthy that, in contrast to previous rate cuts, the forint has not weakened against the euro, but has risen to a one-month high of 379 forints to 1 euro by the end of the month.

During August, the Premium funds had a mixed performance. The higher the risk profile of a Premium fund, the weaker the August performance. The reason for the mixed performance is that while Hungarian bond exposures, whether longer-dated portfolios or short money market ones, put in a positive performance, domestic equities also had a strong month. However, international bonds and equities have typically lost ground. US corporate equities and European bourses had a weak month, as did government bonds from developed economies and emerging market foreign currency bonds. Commodities markets also generally saw a decline in prices. The change in the domestic currency exchange rate was not significant during the month, so international investment yields were less affected this time. The absolute return investments in portfolios also had a mixed performance in August.

During the month, we further reduced the weight of domestic absolute return funds and started to rebuild the previously underweight emerging bond exposure and also underweight commodity exposure in the funds' portfolios. This was because we wanted to provide more currency exposure to the funds and we were already seeing interest rate levels for bonds that looked like a much better entry point compared to previous levels. We maintained our equity positions over the month, which meant that we kept developed market equities close to our long-term target levels, while emerging market equities remained underweight.

### GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	The fund has no benchmark
ISIN code:	HU0000716097
Start:	03/07/2016
Currency:	HUF
Net Asset Value of the whole Fund:	377,377,427 HUF
Net Asset Value of A series:	377,377,427 HUF
Net Asset Value per unit:	1.178894 HUF
