

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In the US, at a press conference after the US Federal Reserve's September meeting, the Fed chairman said that he believes US interest rates will remain higher for longer than market participants had previously thought, which could mean that despite the fall in inflation, based on the macroeconomic numbers, the Fed is not willing to cut rates quickly. Also, Fed Chairman Jerome Powell does not seem to want to declare victory over inflation too soon, after his ill-fated "inflation is only temporary" statement two years ago, which means that he is leaning towards tightening, especially while economic indicators are still strong. Powell has also talked about soft-landing, but contrary to market expectations, this is not the Fed's baseline scenario. Real wages in the US are rising again, which is boosting economic activity, and the combined effect of these could lift the inflation trajectory in the coming months.

In Hungary, the MNB has continued to cut interest rates and after a long period, the base rate and the policy rate are the same. The base rate is now only 13%, which raises the question of how the forint will react to this. Although 13% is the highest in the region, the political risk premium makes it uncertain that the forint can remain stable. The MNB expects domestic inflation and core inflation to continue to fall at a rapid pace in the coming months. As the pace of disinflation continues to accelerate, inflation is expected to ease into the single-digit range in the autumn.

The fund continued to deliver positive returns in September thanks to the weakening forint, the high liquidity ratio in the portfolio and low risk positioning. During the month, we closed the forint position above 390 and also made a small rebalancing in the equity portfolio, as we took profits in the CEE small-cap equities and bought small amounts of relatively cheap regional equities into the fund. The fund intends to use its high liquidity to buy value assets that become cheap in a market turbulence, with keeping an eye to safety.
