

VIG BondMaxx Total Return Bond Investment Fund

C series CZK MONTHLY report - 2023 SEPTEMBER (made on: 09/30/2023)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

Last month, the FOMC paused rates hiking and published a hawkish set of interest-rate projections, indicating that monetary policy will likely remain tighter for longer. Both the BoE and the SNB surprisingly refrained from raising rates, while the Riksbank and the Norges Bank delivered the expected 25bp hikes. Eurozone PMIs continue to point to stagnation or slight contraction in activity. Eurozone both headline and core CPI have eased substantially last month, to 4.3% and to 4.5%, respectively. The Italian government increased its budget-deficit/GDP target for 2024 to 4.3% (from 3.7% in April), while the public debt/GDP ratio is projected to stabilize overall. In the US, Congress has reached a deal to avoid a government shutdown "at the last minute". US personal consumption growth for Q2 '23 was revised significantly downwards to 0.8% from 1.7%, the slowest pace in more than a year. Declining inflation across the Eurozone triggered some relief during a volatile last week of September. The 10Y Bund yield returned to the 2.85% area after approaching 3%. The 10Y BTP-Bund spread tightened 10bp, after reaching 200bp. The swings on rates shaped performance for equity and credit markets, which are offsetting their earlier losses. In FX, EURUSD regained 1.06 after falling below 1.05, while a rally up to 150 for USDJPY was averted. The fund still keeps its Ukrainian exposure, and waits for improvement in the Ukrainian-Russia war; we increased exposure to the UK and French long-term government bonds, opened positions in the short-term Deutsche Bank's bonds and switched to slightly longer Romanian government papers, further intention to raise exposure to the core rates markets while decreasing Hungarian risk stays in place.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 2.8%
