

VIG Developed Market Short Term Bond Investment Fund

UI series USD MONTHLY report - 2023 SEPTEMBER (made on: 09/30/2023)

INVESTMENT POLICY OF THE FUND

The aim of the Fund is to increase the euro savings held in the Fund, while assuming low interest-rate and credit risk. The Fund mainly buys short-term, euro-denominated bonds of investment-grade issuers, and aims to generate a return for investors through interest income and price gains on them. The Fund Manager invests the savings held in the Fund in short-term bonds denominated in euros. The Fund Manager assumes a low interest-rate risk; the modified duration of the portfolio is more than 6 months, but may not be higher than 2.5 years. The Fund also follows a cautious strategy in terms of assuming credit risk, investing a maximum of just 10% of its assets in bonds of non-investment grade or non-credit rated issuers. The Fund primarily invests in developed-market government securities, but this can also be supplemented by credit-institution, corporate and/or municipal bonds, as well as by term deposits and repo transactions. The Fund can also invest a small part of its portfolio in emerging markets. In addition, the Fund may invest in collective investment forms, and can fine-tune the design of its portfolio through the use of derivatives (stock-exchange and OTC transactions). The Fund invests exclusively in securities denominated in euros, and may hold currency assets in bank deposits or bank accounts only for the purpose of liquidity management and currency hedging. It is not possible to make individual investor decisions in the Fund. No individual investor's decisions can be made in the Fund.

MARKET SUMMARY

Last month, the FOMC paused rates hiking and published a hawkish set of interest-rate projections, indicating that monetary policy will likely remain tighter for longer. Both the BoE and the SNB surprisingly refrained from raising rates, while the Riksbank and the Norges Bank delivered the expected 25bp hikes. Eurozone PMIs continue to point to stagnation or slight contraction in activity. Eurozone both headline and core CPI have eased substantially last month, to 4.3% and to 4.5%, respectively. The Italian government increased its budget-deficit/GDP target for 2024 to 4.3% (from 3.7% in April), while the public debt/GDP ratio is projected to stabilize overall. In the US, Congress has reached a deal to avoid a government shutdown "at the last minute". US personal consumption growth for Q2 '23 was revised significantly downwards to 0.8% from 1.7%, the slowest pace in more than a year. Declining inflation across the Eurozone triggered some relief during a volatile last week of September. The 10Y Bund yield returned to the 2.85% area after approaching 3%. The 10Y BTP-Bund spread tightened 10bp, after reaching 200bp. The swings on rates shaped performance for equity and credit markets, which are offsetting their earlier losses. In FX, EURUSD regained 1.06 after falling below 1.05, while a rally up to 150 for USDJPY was averted. Initial allocation of the fund is fully focused on high-quality investment grade investments with more than 80% in government bonds and a bit less than 10% in each supranationals and corporates, top 3 biggest positions in Germany, Italy and Spain followed by France, Belgium, Austria and Portugal.
