VIG Panorama Total Return Investment Fund

C series CZK MONTHLY report - 2023 OCTOBER (made on: 10/31/2023)

Weight

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to achieve a return in excess of the benchmark index through the positions it takes and the exchange rate movements. The Fund seeks to choose from the different investment schemes with the greatest possible freedom and without any industry or geographical specification. By monitoring global economic trends, the Fund tries to identify medium-term trends and themes – such as inflation or deflation, globalisation or deglobalisation – that may play an important role in shaping capital market movements over the Fund's investment horizon. Once these themes have been identified, the Fund will take positions that offer the expected return if these trends materialise. The Fund actively allocates money across different asset classes (equity / bond /foreign currency /commodity markets) and also within each asset class, depending on which assets or asset classes are most likely to benefit from the identified economic trends. The Fund, seeking to exploit a combination of medium- and long-term trends in various instruments, may buy or sell shares, bonds and other securities, or acquire long or short futures (stock-exchange) or forward (OTC) positions, and may also enter into options transactions. The Fund Manager selects investment instruments and adjusts their weighting, using its fundamental and technical analysis tools, in such a way that the Fund has the opportunity and scope to outperform the benchmark, with reasonable risk taking and appropriate diversification. The Fund does not designate a country, region or industry as its investment destination and its outlook is global. The Fund may, on occasion, have significant unhedged or other currency exposures.

MARKET SUMMARY

In October, the Hamas-Israel war caused oil prices to rise 10%, but as the chances of the war not turning into a wider Middle East crisis diminished, oil prices fell back to pre-conflict levels. The US Federal Reserve is still communicating a very tight monetary policy, but markets are becoming immune because the accepted view is that a recession will come sooner or later and then the Fed is expected to cut interest rates. Currently, bond markets are pricing in the first rate cut in May by next year, with an 80 basis point cut priced in for 2024. The Hungarian National Bank has decided to cut its base rate by 75 basis points in October, slowing from the previous 100 basis point rate cut. The decision came as some surprise as the consensus had expected only a 50 basis point cut. In the statement released, the MNB indicated that strong disinflation and the reduction in the country's vulnerabilities allow for a continuing to cut interest rates at a slower pace than before. Vice-President Barnabas Virág said that the decision would be taken in a step-by-step, cautious and data-driven manner, depending on the factors affecting the inflation path and the evolution of the risk environment. The forint strengthened against the euro throughout October, but weakened slightly after the rate decision meeting.

The return on the fund was positive in October. Two major adjustments were made during the month. We reduced the weighting of commodities to a minimum after oil failed to rise above its September highs, despite geopolitical tensions, and gold stopped rising despite falling yields. We have also reduced the size of US bond shorts positions significantly, long yields of around 5% have stopped the rise in yields in the short term, but deteriorating growth data and a now apparently no further tightening by the Fed have reversed the market. We also made small short-term pair trades in the fund, such as buying gold mining stocks against gold shorts as valuations diverged. At the end of the month, we opened a copper futures position on the back of improved risk sentiment and an improving technical picture due to the seasonally favorable period.
