

VIG BondMaxx Total Return Bond Investment Fund

U series USD MONTHLY report - 2023 NOVEMBER (made on: 11/30/2023)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

In November, Eurozone headline and core inflation eased further, to 2.4% and 3.6%, respectively. The President of the European Central Bank, Christine Lagarde said that the central bank might rethink its pandemic purchase programme (PEPP) strategy, which currently foresees full reinvestment until the end of the next year. In the US, core Personal Consumption Expenditure (PCE) inflation slipped to 3.5% YoY in October (below the level of the Fed expectations for the end of the year), while the Beige Book (summary of information on current economic conditions through reports and interviews summarized by the Fed) indicated economic activity had slowed and is expected to slow thereafter. US Congress passed a stopgap spending bill until mid-January. German industrial production contracted in September for a fifth consecutive month. The UK economy stagnated in Q3. In China, inflation fell slightly below zero, reflecting weak domestic demand amid weak exports. Brent oil prices briefly fell below \$80/bbl on global demand fears, reversed some of the losses later in the month on OPEC rumours of further production cuts while the outlook looks gloomy yet. Equity markets moved sideways, while EGB and UST curves bull steepened, following lower-than-expected inflation. Corporate credit spreads tightened slightly. EUR-USD fell back below 1.09 after hitting 1.10, also reversing the initial rally in CEE FX. The fund still keeps its Ukrainian exposure, and waits for improvement in the Ukrainian-Russia war; no significant changes to the fund's composition were made, further intention to raise exposure to the core rates markets while decreasing Hungarian risk stays in place.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 1.1%
