

INVESTMENT POLICY OF THE FUND

The Fund aims to achieve capital growth by investing in bonds of emerging European countries and state-owned companies. The Fund does not apply credit rating restrictions: it may purchase securities of any country or company with any long-term credit rating. The Fund aims for the highest possible capital growth alongside reasonable risk-taking. The Fund primarily purchases foreign currency emerging market bonds, in addition to which it holds Hungarian local currency short-term and long-term bonds for diversification and liquidity management purposes. The bond portfolio may also include short-term, long-term, fixed or floating-rate, structured and convertible bonds issued by mortgage credit institutions, other credit institutions, local governments or other business entities. The core of the Fund's investments is Central Eastern Europe (Hungary, Croatia, Poland, Romania, Slovakia, Ukraine), South East Europe (Serbia, Turkey), the Baltics (Latvia, Lithuania) and the Commonwealth of Independent States (Azerbaijan, Belarus, Kazakhstan, Russia, Georgia, Armenia) and bonds of majority state-owned companies, in addition to which the Fund holds short-term and long-term Hungarian government securities for diversification and liquidity management purposes. The target weight for bond exposures in the Fund in the 16 countries listed (target countries) is 95%. We do not set a limit on debt classification in the Fund. The Fund may only conclude derivative transactions for hedging purposes, or in the interest of establishing an efficient portfolio. The Fund may also hold non-leveraged bond-type collective investment forms. The Fund may also take on significant foreign currency exposure, which is normally covered 100% by the Fund Manager in the target currency (USD), but depending on market conditions, the Fund may also hold open foreign currency positions.

MARKET SUMMARY

In November, Eurozone headline and core inflation eased further, to 2.4% and 3.6%, respectively. The President of the European Central Bank, Christine Lagarde said that the central bank might rethink its pandemic purchase programme (PEPP) strategy, which currently foresees full reinvestment until the end of the next year. In the US, core Personal Consumption Expenditure (PCE) inflation slipped to 3.5% YoY in October (below the level of the Fed expectations for the end of the year), while the Beige Book (summary of information on current economic conditions through reports and interviews summarized by the Fed) indicated economic activity had slowed and is expected to slow thereafter. US Congress passed a stopgap spending bill until mid-January. German industrial production contracted in September for a fifth consecutive month. The UK economy stagnated in Q3. In China, inflation fell slightly below zero, reflecting weak domestic demand amid weak exports. Brent oil prices briefly fell below \$80/bbl on global demand fears, reversed some of the losses later in the month on OPEC rumours of further production cuts while the outlook looks gloomy yet. Equity markets moved sideways, while EGB and UST curves bull steepened, following lower-than-expected inflation. Corporate credit spreads tightened slightly. EUR-USD fell back below 1.09 after hitting 1.10, also reversing the initial rally in CEE FX. We didn't make meaningful changes to the fund's composition throughout last month.
