

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In November, disinflation continued in Hungary, with headline inflation arriving at 7,9% below the market expectations of 8%. During the month, fuel prices continued to decrease, which had a positive impact on disinflation. In December 2022, due to supply problems, the government abolished the fuel price cap, so next month the lower base will be excluded from the calculations, which will have a positive impact on the year-on-year inflation. At the November rate setting meeting the Monetary Council reduced the base interest rate by 75 basis points, bringing the benchmark rate to 11.5%, which was in line with market expectations. The Monetary Council considered several scenarios again when making the decision, but in the communication of the Deputy Governor of the NBH, Barnabás Virág, it was projected that they would proceed with 75 basis points steps until February, by when the base rate will reach the single digit territory. This is intended to maintain a higher real interest rate in the economy. During the month, discount bill yields continued to decline, with the average yield on the 3-month T-bill auctions decreasing from 8,27% to 7,85% by the end of the month. However yields on the 6- and 12 month auctions stabilized somewhat above 8%. Given strong disinflation and the rate cut cycle, we continue to expect short-term yields to decrease, so we prioritize keeping the duration higher going forward.
