

INVESTMENT POLICY OF THE FUND

The objective of the investment fund is to make the Polish bond market accessible to the investors, and to function as a relatively stable, medium-risk investment form bringing steady real yields to our Clients on middle term already, without having to tie down their money for a fixed period of time. The Fund mainly invests in Polish government securities issued in zloty, however, the portfolio manager has some room to complement the portfolio with other bond-type investments. Our goal is to achieve the highest yield while taking the lowest risk. To make investment decisions we use the tools of both fundamental and technical analysis, and we take into consideration the investor sentiment on the markets at all times. The portfolio manager seeks out potential investment opportunities based on the macro-economical expectations, the expected yield curve, the return expected on the curve and the market volatility, and selects investments that are considered to be safe and bring relatively high yields in exchange for the risks taken. The Fund strives for complete exchange risk coverage of foreign currency exposure for the target currency.

MARKET SUMMARY

In November, Polish bonds showed mixed performance: the short and mid part of the yield curve moved higher, yields on the long end however decreased 10-15 basis points during the month. At the beginning of the month, the Polish central bank kept the base rate unchanged, so it remained at 5,75% versus market expectations of a cut by 25bps. In their statement rate setters suggested that uncertainty regarding the fiscal and regulatory environment may significantly impact the inflation path, that is why unchanged rates are more appropriate. In January, the VAT rate on food is set to increase to 5% from 0%, unless the new cabinet decides differently." Additionally, the government will need to decide on the fate of expiring electricity price caps. These measures will either increase the inflation path (in case of abolition) or will increase the budget deficit further (in case of prolongation). Moving on with the economic data, preliminary data indicated that in November, year on year inflation in Poland decreased from 6,6% to 6,5%. Therefore inflation is currently at levels not seen since September 2021 primarily due to lower fuel and food prices. Disinflation process may stall around these levels for the next months. Polish GDP growth in Q3 was revised higher to 0.5% YoY from 0.4% in the flash release. According to Bloomberg's November survey, the Polish economy is expected to grow by 0.4% this year and by 2.8% next year. The Purchasing Managers' Index (PMI) rose to 48,7 in November from the previous month's 44.5, above the market expectations. The index is still below the 50 threshold, indicating a contraction, as both output and new orders continued to decline due to the uncertain economic environment. In October, industrial production recorded a 1,6% increase, which was in line with the market expectations. Growth started to rebound as consumers are back amid increasing real wages. Regarding the state budget, the government generated a deficit of 1 725.28 million PLN in the tenth month, bringing the rolling 12-month budget deficit to 2,3% of GDP.
