

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, low-risk form of investment, while providing investors with higher returns than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) and bonds issued by the National Bank of Hungary (MNB). The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated primarily in HUF, but also in other currencies. The Fund may also invest to a limited extent in government securities or guaranteed bonds issued by the OECD or a G20 country, or any debt security issued or guaranteed by the central government or a regional or local government or the central bank of any EU Member State, or by the European Union, the European Central Bank or the European Investment Bank. The weighted average maturity (WAM) of the assets in the portfolio may not exceed 6 months and the weighted average life (WAL) of the assets may not exceed 12 months. In addition, the remaining time to maturity of each security is a maximum of 2 years and a maximum of 397 days until the nearest interest-rate determination date. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

Aegon Moneymarket Fund is not a guaranteed investment. The risk of loss of the principal is to be borne by the investor. An investment in Aegon Moneymarket Fund is different from an investment in deposits, with particular reference to the risk that the principal invested in Aegon Moneymarket Fund is capable of fluctuation. Aegon Moneymarket Fund does not rely on external support for guaranteeing the liquidity of the fund or stabilising the NAV per unit or share.

MARKET SUMMARY

In December, disinflation continued in Hungary, the pace of price increases have decreased to 5,5%. This means, that not only did the rate of price increases close the year in single digits, but inflation in December was nearly 20% lower compared to the peak in January. In December, the lower fuel prices fell out of the base, contributing positively to disinflation. However, in January 2024, several tax changes are expected to push prices higher, potentially slowing down the rapid decrease in inflation. At the last rate setting meeting of the year, the Monetary Council continued the rate cut cycle by cutting the base rate by 75 basis points, ending the year at 10,75%. From January onwards, if the risk assessment remains positive, it is feasible that the pace of rate cuts could accelerate to 100 basis points. During the month, discount bill yields continued to decline. The end of the year typically results in a decrease in short-term yields due to increased demand. As a result the average yield on the 3-month T-bill auctions decreased from 7,33% to 6,47% by the end of the month. Yields on the 6- and 12 month auctions however stabilized somewhat even lower in the range of 6,2% and 6,3%. The strategy during the year proved to be a good decision due to the decrease in inflation, leading to the fund outperforming the benchmark in 2023.
