

## INVESTMENT POLICY OF THE FUND

The Fund purchases stocks issued by companies in Central and Eastern European region (primarily Hungary, the Czech Republic, Poland, Austria, Romania, secondarily Slovenia, Croatia), but it may also invest in the stocks of other developing and developed foreign companies as well as other collective investment securities. The Fund may hedge some or all of its foreign currency risk using forward currency positions against the target currency composition of the Fund, i.e., the current settlement currency of the benchmark (CEE region currencies), depending on the market processes. In addition, the use of equity and index futures is permitted in order to effectively build the Fund's portfolio. To ensure liquidity, the Fund wishes to add government securities issued by the Government Debt Management Agency on behalf of the Hungarian State to its portfolio. There is no possibility for making individual investor decisions in respect of the Fund.

## MARKET SUMMARY

The main event in December was the central bank's interest rate decision meeting. It is now accepted view that inflation has been contained and the year-on-year figure has been falling for months, but the big question was how the Fed would respond. At the post-meeting press briefing, investors got an answer to that question, wrapped in as a Christmas present. Based on Fed Chairman Jerome Powell's statements, investors can take it for granted that the cycle of rate hikes is over and the higher-for-longer principle on interest rates is also over. While the Chairman hinted that interest rate policy will continue to be determined by macro data, investors read between the lines that not only will there be no more rate hikes, but that there will be rate cuts in 2024. As a result, market participants have started to raise their target rates for next year. There are, of course, analysts who believe that early rate cuts are a throwback to the 1970s, when the Fed started cutting rates early and inflation started to rise again. The Hungarian National Bank cut its base rate by another 75 basis points to 10.75%, and inflation also fell further in November, now at 7.9%, and according to the Hungarian Central Statistical Office, it could fall below 7% in December. The only change in the MNB's communication was that they no longer consider it out of the question that they could cut rates by as much as 100 basis points next time. Vice President Barnabas Virág said that the rate cut would become data-dependent and that if justified, they would not rule out cutting rates by more than 75 basis points. Meanwhile, the forint remained relatively stable against the euro, it did not move significantly from around 380 level.

December was another very strong month for Central European stock markets. The Czech market underperformed slightly in the month, other regional markets up nearly 5%. Looking at the different sectors, retailers outperformed this time, but communication services and industrials also did well. The Fund's performance relative to the benchmark index was also strong, as the Fund starting the month a 110% equity weighting and off-benchmark stocks outperformed, Wizzair, ANY, Dunahouse, Pepco and Magyar Telekom all posting double-digit gains. While we remain confident in the good performance of regional equity markets, we realized some positions (mainly on the Polish market) by the end of the month, reducing the Fund's equity weight to 103%.
