

VIG Alfa Absolute Return Investment Fund

C series CZK MONTHLY report - 2024 JANUARY (made on: 01/31/2024)

INVESTMENT POLICY OF THE FUND

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The Fund applies special investment strategies used by hedge funds to establish its strategy. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds (treasury bonds, discounted treasury bills, bonds issued by the National Bank of Hungary, as well as low-risk bank and corporate bonds expected to bring higher yields than the state securities) Equities and other securities, indices and currencies - provided it sees the opportunity to make substantial gains – up to the maximum limit allowed by the law, which allows double leverage for the Fund. In its investment decisionmaking mechanism, the Fund considers fundamental pricing, technical and behavioral psychological factors To ensure liquidity the Fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY

In January, markets were still trying to decide whether or not the economic scenario outlined by the Federal Reserve would materialize. Since last November, the Fed has been saying that the economy will be soft landing, despite a 5.25% interest rate and several macroeconomic data points pointing to a recession in the US economy. Investors who positive about the future are looking at how much AI will reform the US economy and what fundamental changes it will bring to the economy. But there are those who believe that the Fed has raised interest rates too high in an attempt to curb inflation and that a recession is inevitable. But if it starts to cut rates because of a potential recession and inflation starts to rise again, the Fed will be backed into a corner. In 2024, the Fed's decisions will be even more influenced by macro data and markets could be more volatile than usual.

The Hungarian National Bank cut its key rate by another 75 basis points to 10.00%. Inflation also continued to fall in November, to 5.5% according to KSH data, and could fall below 5% in January. In December, the National Bank had indicated that it could cut the key rate by up to 100 basis points, but it stuck to 75 basis points due to the weakening forint. Interestingly, after the lower-than-expected rate decision, the forint strengthened and traded below 385 against the euro at the end of the month.

The fund achieved a positive return in January as the risk-off period in equity markets persisted. US equities reached a new high, regional bond yields decreased slightly due to lower inflation numbers, and the Hungarian equity market continued to rise as it remains undervalued. The equity weighting remained largely unchanged. We reduced our exposure to Magyar Telekom and OTP, realizing a profit. However, we used the proceeds to purchase MOL and Richter shares during the month and opened a long position in the Russell 2000 Index. The fund successfully exploited the weakening and rapid recovery of the forint with trades in the EUR 380 and EUR 390HUF range. The regional capital market is currently trading at a significant discount. The Fund plans to take advantage of this by investing in Hungarian equities, regional corporate and bank bonds, and Romanian government bonds. Additionally, the Fund will maintain significant liquidity and only reduce it in the event of a significant negative correction.
