

VIG BondMaxx Total Return Bond Investment Fund

C series CZK MONTHLY report - 2024 FEBRUARY (made on: 02/29/2024)

INVESTMENT POLICY OF THE FUND

The Fund is a total return investment fund that aims to create a portfolio consisting of bond-type assets through active portfolio management that achieves annualised capital growth for investors higher than the benchmark over a 3-year time horizon. It intends to achieve this objective primarily through asset allocation in global bond markets.

The Fund invests exclusively in bond-type instruments. The Fund's investment universe focuses on developed market government bonds, developed market corporate bonds, local currency emerging market government bonds and hard currency emerging market government and corporate bonds. The primary source of return for the Fund is asset allocation across bond-type asset classes. The asset allocation is based on an "investment clock" approach that uses economic data analysis to determine the position of major regions within a growth cycle. This is complemented by the forecasting of expected movements in real interest rates and inflation expectations, which are also crucial for the allocation across bond markets. Portfolio managers use all these as the basis for making allocation decisions, overweighting the best performing bond asset class in any current economic cycle based on experience and expectations. In the investment process, portfolio managers optimise the interest rate and credit risk of the overall fund and of the exposures to individual bond markets in order to achieve the investment objective.

MARKET SUMMARY

Last month, the Eurozone composite PMI rose supported by a stronger services sector, while the contraction in German manufacturing deepened. The Ifo index improved somewhat, also supported by services. EU CPI in February decelerated less than forecasted amid sticky services prices, while the US core PCE deflator for January marked its strongest monthly rise over a year. Both data reinforce market's view that the ECB and the Fed are less likely to cut rates before June. In Japan, inflation data supported expectations that the BoJ is close to exiting negative rates. 10Y EGB yields were up around 10bp on the last week of February. Italy sold around EUR 18 billion of new BTP Valore Mar30, with robust demand from retail investors supporting the whole BTP market. EUR IG and HY spreads widened moderately amid strong supply. Equity markets were mixed. In FX, EUR-USD steadied close to 1.08, while the USD-JPY break below 150 was short-lived. In CEE, the HUF underperformed given the acceleration in NBH rate cuts and disputes over central bank independence. The fund still keeps its Ukrainian exposure, and waits for improvement in the Ukrainian-Russia war; no significant changes to the fund's composition were made, except for switching to the EU from German government bonds, further intention to raise exposure to the core rates markets while decreasing Hungarian risk stays in place.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Raiffeisen Bank Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 3.5%
