

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In the US, the most important market event remains the Federal Reserve's interest rate meeting and the subsequent press conference. Investors will be trying to guess when the Fed will cut rates for the first time and how many rate cuts there will be in 2024. 2023 has ended with the idea that this year the economy will either land hard, meaning a recession, or soft, meaning the economy will slow but there will be no recession. At the rate-setting meeting, it was decided not to cut interest rates just yet as inflation is falling, but there are signs that inflation could rise again in the future. According to the central bank president, "it would be inappropriate to lower interest rates before there is greater certainty that inflation is on a sustainable path towards the 2% target".

The Hungarian National Bank cut its key interest rate by 100 basis points to 9.00% in January. The decision was not unanimous, but according to the bank's vice-president Barnabas Virág, a large majority supported the higher rate cut. The decision was heavily influenced by the fact that inflation has fallen faster than market and central bank expectations, and that although global political risks remain, but these have not led to an increase in energy prices. The Hungarian economy is experiencing strong and widespread disinflation. Consumer prices rose by 3.8% year-on-year in January, bringing inflation within the central bank's tolerance band. According to the Vice-President's forecast, the key interest rate will be lowered to 6-7% by the end of the first half of the year. Following the rate decision, the forint weakened against the euro, rising above the 390 level.

The tempo funds performed well in February. In February we will not change the positions in the Tempo funds that were established in the January tactical decision. This means that developed equity market exposure remains neutral to emerging markets, we continue to favor the Central European region over global emerging markets, with the overall weight of this exposure remaining slightly underweight. The bond market exposure remains slightly overweight. TempoMaxx also has developed equity exposure at neutral levels, while emerging equity exposure is below strategic levels. The weighting of the bond asset class is maintained at a level in line with the benchmark.
