Website: <https://www.vigam.hu>

Call 06-1-477-4814 for more information!

VIG Asset Management Hungary Closed Company Limited by Shares is supervised by the **National Bank of Hungary** with respect to this document containing key information.

What is this product?

Type: public, open-ended, harmonised in accordance with the UCITS Directive.

Currency of the series: Czech Koruna (CZK)

Benchmark: The Fund has no benchmark index. Term: The fund has an indefinite term, and does not expire, so the investment fund shares can be redeemed at any time.

Objectives: The purpose of the investment fund is to create an equity fund that can profit from long-term demographic changes and the related changes in consumer habits. The Fund aims to achieve long-term capital growth by investing in the equities of global companies that can benefit from the growth and aging of the population, the social and economic changes associated with a healthy lifestyle, urbanisation, the expansion of the emerging markets' middle class and the global economic trends stemming from these social changes, as well as the evolving consumption habits driven by such demographic shifts.

The Fund seeks to achieve its objectives mainly through equity-type instruments, primarily exchange-traded funds (ETFs), equities and open-ended public investment funds. Furthermore, it may hold domestic and international equities in its portfolio in addition to domestic and international government securities, and may enter into deposit and repurchase agreements, and may also use derivatives. Investments are made in companies that have strong fundamentals and are well positioned for long-term value creation and competitive advantage due to demographic and social changes. Trends related to demographic and social changes are long-term processes that go beyond normal economic cycles and are generally global and affect the entire world. Consequently, the Fund is not subject to any geographical restrictions. Since the Fund aims to profit from long-term growth and has significant exposure to the equity market, we recommend the Fund to investors who want to invest in the longer term and have a relatively high willingness to take risk.

The main factors affecting the Fund's returns are the following: changes in the prices of the financial instruments in the Fund's portfolio, the risks assumed by the Fund, the gain/loss resulting from the currency exposure of the Fund and the change in the operating and other expenses of the Fund. The Fund is able to generate returns through the appreciation of the financial assets in its portfolio. The Fund's return is calculated in accordance with Annex 3 of the Bszt. (Act CXXXVIII of 2007).

The Fund may hedge some or all of its currency risk by taking forward foreign currency positions against the target currency (USD). In order to efficiently develop the portfolio, the Fund may also enter into equity and index futures contracts. It is the discretionary right of the Fund Manager to decide, in light of trends in the market, whether to reduce the currency risk of positions denominated in currencies other than the target currency by entering into hedging transactions.

No individual investor's decisions can be made in the Fund. The Fund Manager minimizes the currency risk of Series C and CI of the Fund against the Fund's target currency through currency forward contracts allocated exclusively to this series (For CZK-denominated series, CZKUSD hedging transactions are understood)

Yield, yield payment: The Fund does not pay yield against the capital growth, and the entire capital growth will be reinvested in accordance with the Fund's investment policy. Investors can realise the capital growth as the difference between the purchase and redemption prices of the Investment Fund Shares they own, as a price gain.

Information about sustainability: The Fund qualifies as a financial product promoting environmental or social characteristics, or a combination of those characteristics. (SFDR, Article 8)

Intended retail investor: in certain cases, this fund is not suitable for investors, who want to withdraw their money within the recommended retention period.

Termination of the Fund: The fund manager is obligated to terminate the public open-ended investment fund if the average equity of the fund is lower than twenty million forints over a period of three months. The rules concerning the termination of the Fund, the sale of the Fund's assets, and the disbursement of the estate are set out in Sections 75-79 of Act XVI of 2014 on Collective Investment Trusts and Their Managers and on the Amendment of Financial Regulations.

What are the risks and what could I get in return?

Risk indicator: The summary risk indicator provides guidance regarding the risk level of this product compared to other products. It shows the likelihood that the product will cause financial loss due to the movements of the markets or because we are unable to pay you.

The summary risk indicator presents the risk/profit ratio of the product based on the summary of the market risk indicator calculated from past returns. Historic data are not necessarily reliable indicators of the future risk profile, however, so this may change over time. Not even the lowest risk category can be understood as a fully risk-free investment.

This product does not include protection against future market performance, so you may lose a part or all of your investment. If we are unable to pay the amount due to you, you may lose your entire investment.

The risk indicator assumes that you keep the product until the end of the recommended retention period (4 years). The actual risk may be significantly higher if you redeem the product earlier, and it is possible that you get back a lower amount. The product is classified into the fourth, medium risk class of the 7-tier risk scale, because bad market conditions during the implementation of the Fund's investment policy may possibly affect the Fund's ability to pay you.

The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately.

The unfavourable, moderate and favourable scenarios presented are illustrations presenting the worst, average and best performance of the product – or prior to the launch of the product, the relevant benchmark – in the past 10 years. Future market developments may vary.

Investment: once 250.000 CZK		If you exit after 1 year	If you exit after 4 years
Stress scenario	What you might get back after costs	162155 CZK	66665 CZK
	Average return each year	-35,14%	-28,14%
Unfavorable scenario	What you might get back after costs	216073 CZK	222552 CZK
	Average return each year	-13,57%	-2,87%
Moderate scenario	What you might get back after costs	265920 CZK	323159 CZK
	Average return each year	6,37%	6,63%
Favourable scenario	What you might get back after costs	355198 CZK	372602 CZK
	Average return each year	42,08%	10,49%

This table shows the amount of money you can get back at the end of the first year and at the end of the recommended holding period in accordance with the different scenarios, assuming that you invest 250.000 CZK amount. The “unfavourable” scenario type reflects the most unfavourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between October 2013 and October 2023. The “moderate” scenario type reflects the average development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between October 2013 and October 2023. The “favourable” scenario type reflects the most favourable development of the value of the product – and, prior to the launch of the product, the relevant benchmark – with respect to investments made between October 2013 and October 2023. The yield that you may realise from this product depends on future market performance. Future market developments are uncertain and cannot be predicted accurately. The numbers presented include all costs of the product itself (though they may not include all the costs that you may be paying to your consultant or distributor). The numbers do not take into account your personal tax situation, which may also influence the amount you get back. The stress scenario shows the amount you can get back from the invested capital in case of extreme market circumstances.

What happen if the Fund Manager is unable to pay?

The potential insolvency of the Fund Manager does not jeopardise the repayment of the investors' savings in the Fund. If, based on the contract between the investor and the VIG Asset Manager – as Head Distributor – or the investment service provider managing the securities account, the VIG Asset Manager or the contracted service provider is unable to release to the investor the security held for the investor, the Investment Protection Fund (by its Hungarian abbreviation: “BEVA”) undertakes to be liable for indemnification. BEVA's indemnity obligation will become effective if the Supervisory Authority initiates liquidation proceedings against the BEVA member based on the law, or a court orders the liquidation of the BEVA member. The insurance provided by BEVA will not cover losses arising from the change of value of the investment. BEVA will pay the claim of the investor entitled to indemnification for up to an amount of one hundred thousand euros (in aggregate per person and investment enterprise, i.e., per BEVA member). The rate of the indemnity to be paid by the Fund is one hundred percent up to an amount of one million forints, and is one million forints and ninety percent of the portion above one million forints in the case of claims exceeding one million forints.

What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

‘Costs over time The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product [and how well the product does (where applicable)]. The amounts shown here are illustrations based on an example investment amount and different possible investment periods. We have assumed: In the first year you would get back the amount that you invested (0 % annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario. 250.000 CZK is invested.

Costs over time: investment once 250.000 CZK	If you exit after 1 year	If you exit after 2 years	If you exit after 4 years (recommended holding period)
Total costs	2900 CZK	7497 CZK	14995 CZK
Annual cost impact (*)	1,16%	1,16%	1,16%

(*) 'This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 7,79% before costs and 6,63 % after costs.'

Composition of Costs			
One-off costs upon entry or exit	Entry costs	maximum 5,0%	This includes distribution costs equivalent to 5% of the invested amount 12.500 CZK. This is the maximum amount charged to you. The person selling the product to you will inform you about the actual fee.
	Exit costs	maximum 3,5%	3.5% of your investment before it is paid to you.
Ongoing costs (taken each year)	Management fees and other administrative or operative costs	1,16%	1,16% of the annual value of your investment. This is an estimate based on the actual costs of the past year.
	Transaction costs	0,12%	0,12% of the annual value of your investment. This is an estimate based on the costs incurred during our purchase and sale of investments on behalf of the product. The actual amount will vary depending on how much we buy and sell.
Incidental costs	Performance fees	Nincs	There is no performance fee for this product.

How long should I hold it and can I take money out early?

Recommended holding period: 4 years

The Product has no cooling-off or withdrawal period, as its term is indefinite being open-ended, i.e., it can be redeemed at any time. This Fund is not suitable for investors who intend to reclaim their money from the fund within the minimum recommended investment time. If any holder of the Investment Fund Share(s) places a redemption or conversion order for the investment fund shares of the same investment fund within 10 sales days of the time of the purchase or conversion order (T+10), the distributors will charge a penalty premium of 2% in excess of the regular premium, which will be paid to the Fund. The time interval required for the penalty premium to apply shall be determined based on the FIFO principle.

How can I complain?
