

INVESTMENT POLICY OF THE FUND

MARKET SUMMARY

In the US, the main market-driving event remains the Federal Reserve's interest rate meeting and subsequent press conference. As expected, the key rate was left unchanged, but Jerome Powell made waves at the press conference afterwards. The Fed chairman said, albeit implicitly, that the Fed will no longer aim to keep inflation below 2% and will focus on the unemployment rate. This is a complete reversal of previous statements. Whereas the Fed chairman had previously stressed that his priority was to reduce US inflation, he is now prepared to cut interest rates even if inflation remains higher than expected. This, in turn, puts the investment spectrum on a completely different footing. If the central bank's priority is no longer to reduce inflation, and if it is prepared to cut interest rates because of weak unemployment data, then monetary policy will effectively be reminiscent of the 1970s. Relatively low economic activity and high inflation. That would not be good for anyone, and we can be sure that the markets will test the Fed chairman. In Hungary, the Hungarian National Bank cut its key rate by 75 basis points to 8.25% in March. Vice-president Barnabás Virág said the decision was unanimous. He added that the interest rate will be lowered in smaller increments in the future and that he expects it to be between 6-7% by the summer. The MNB expects inflation to fall to around 5-6% by 2024, and that in the future the forint's appreciation and depreciation will have a greater impact on inflation rates. Following the rate decision, the forint weakened slightly against the euro, rising above the 395 level.

The Premium Everest Fund continued to perform well in March. Last month we reviewed our longer-term strategy, based on our ongoing monitoring of bond and equity markets, to more closely align our monthly investment decisions with the potential for higher returns. Within bond market exposure, the domestic bond market is at neutral weight, while emerging market and developed market bonds are slightly overweight. Within equity market exposure, emerging market equities are in line with the benchmark, while Central European and developed market equities are slightly overweight. Commodities and absolute return investments are at neutral levels.
