I series HUF

HUF MONTHLY report - 2024 APRIL (made on: 04/30/2024)

INVESTMENT POLICY OF THE FUND

The Fund's aim is to function as a stable, averagely low-risk form of investment, while providing investors with higher returns over the medium term than they could expect from bank deposits. In order to ensure liquidity, the Fund intends primarily to hold in its portfolio government bonds and discount treasury bills issued by the Government Debt Management Agency (ÁKK) on behalf of the Hungarian State, and bonds issued by the National Bank of Hungary (MNB). The Fund may hold in its portfolio low-risk debt securities issued by banks and companies, which are expected to provide higher returns than government securities and are denominated in HUF. The Fund may also keep its liquid assets in bank deposits. The fund may hold a limited amount of foreign currency assets in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY

In April, inflation started to accelerate again, the year on year figure was 3,7%, which was in line with market expectations. Inflation is now largely driven by the price increases in the services sector, as the annual increase in food prices - which makes up the largest part of the consumer basket - is already close to zero, and there has been some normalization in fuel prices during the month due to government influence. During the April rate setting meeting, the central bank decreased the base rate by 50 basis points, bringing the base rate down to 7.75%. According to communication from Barnabás Virág, deputy governor of the central bank, this was the only scenario considered by the central bank, and a uniform decision was reached during the meeting. This marked a new phase in monetary policy, with the pace of rate cuts slowing down. It was emphasized that there will be no rush to further easing, and a realistic scenario is still expected to maintain the central bank's base rate at 6.75-7% by mid-year, but patience is needed as inflation may resume its upward trajectory from May onwards. However, there will be very limited room for further rate cuts in the second half of the year, so it is possible that the central bank will reach the terminal rate by mid-year for 2024. Due to the economic developments in America, the number of expected rate cuts for this year are gradually decreasing, causing significant yield increases in the Hungarian bond market as well during the month. Yields rose by 48 basis points on the 10-year maturity. Thus the regional valuation of the Hungarian bonds increased significantly. As for institutional issuance, 40% of the financing plan for the entire year was fulfilled in April. Thanks to attractive valuations, we have become somewhat more positive on the asset class
