

INVESTMENT POLICY OF THE FUND

The objective of the Fund is to achieve a return in excess of the benchmark index through the positions it takes and the exchange rate movements. The Fund seeks to choose from the different investment schemes with the greatest possible freedom and without any industry or geographical specification. By monitoring global economic trends, the Fund tries to identify medium-term trends and themes – such as inflation or deflation, globalisation or deglobalisation – that may play an important role in shaping capital market movements over the Fund's investment horizon. Once these themes have been identified, the Fund will take positions that offer the expected return if these trends materialise. The Fund actively allocates money across different asset classes (equity / bond /foreign currency /commodity markets) and also within each asset class, depending on which assets or asset classes are most likely to benefit from the identified economic trends. The Fund, seeking to exploit a combination of medium- and long-term trends in various instruments, may buy or sell shares, bonds and other securities, or acquire long or short futures (stock-exchange) or forward (OTC) positions, and may also enter into options transactions. The Fund Manager selects investment instruments and adjusts their weighting, using its fundamental and technical analysis tools, in such a way that the Fund has the opportunity and scope to outperform the benchmark, with reasonable risk taking and appropriate diversification. The Fund does not designate a country, region or industry as its investment destination and its outlook is global. The Fund may, on occasion, have significant unhedged or other currency exposures.

MARKET SUMMARY

In the US, the key market indicators remain inflation and unemployment. The Federal Reserve is confident that its relatively high Fed funds rate will bring inflation down over time, but the big headwind is that policymakers continue to run very large budget deficits. The US national debt is \$34,000bn and rising. The annual interest cost of the debt is already \$1,000bn, which is more than the US spends on defense. Against this backdrop, the Fed has a difficult task, because although it would like to lower interest rates in the face of rising interest costs, the inflation figures do not yet support this decision. The question is what the central bank will do if the unemployment rate starts to rise but inflation does not come down. Although Fed Chairman Jerome Powell believes that the most likely scenario is that the unemployment rate will remain low while inflation gradually declines, the macroeconomic numbers do not support this. Where we think the Fed chairman is wrong is that inflation is not coming from the supply side, but from excessive fiscal spending. This in turn is driven by politicians and there is no will to tighten. Here at home, the Hungarian National Bank cut its key rate by 50 basis points to 7.75% in April. The decision was unanimous, and Barnabás Virág, the bank's vice-president, said that the key rate could fall to 6.50-7.00% by the middle of the year, provided the macro data remain strong. The HNB will decide on the basis of incoming data, and inflation developments will remain an important factor in the decision. Following the rate decision, the forint strengthened slightly against the euro and stabilized around the 392 level at the end of the month.

The Fund, was mainly active in the commodities allocation: as cyclical indicators and the technical picture improved, we decided to increase our exposure to commodities, partly passively and partly through specific instruments. After the strong rally, we protected our gains by shorting gold and oil. We sold our natural gas positions. In the strong rally, we increased the size of our US bond shorts, while in the equity book we mainly took profits on some of our individual equity bets. We also closed with a profit on our CHF/BRL short.

GENERAL INFORMATION

Fund Manager:	VIG Investment Fund Management Hungary
Custodian:	Erste Bank Hungary Zrt.
Main distributor:	VIG Investment Fund Management Hungary
Benchmark composition:	Hurdle rate, annual 7%
ISIN code:	HU0000714266
Start:	11/27/2014
Currency:	HUF
