MONTHLY report - 2024 APRIL (made on: 04/30/2024)

## **INVESTMENT POLICY OF THE FUND**

#### MARKET SUMMARY

In the US, the key market indicators remain inflation and unemployment. The Federal Reserve is confident that its relatively high Fed funds rate will bring inflation down over time, but the big headwind is that policymakers continue to run very large budget deficits. The US national debt is \$34,000bn and rising. The annual interest cost of the debt is already \$1,000bn, which is more than the US spends on defense. Against this backdrop, the Fed has a difficult task, because although it would like to lower interest rates in the face of rising interest costs, the inflation figures do not yet support this decision. The question is what the central bank will do if the unemployment rate starts to rise but inflation does not come down. Although Fed Chairman Jerome Powell believes that the most likely scenario is that the unemployment rate will remain low while inflation gradually declines, the macroeconomic numbers do not support this. Where we think the Fed chairman is wrong is that inflation is not coming from the supply side, but from excessive fiscal spending. This in turn is driven by politicians and there is no will to tighten. Here at home, the Hungarian National Bank cut its key rate by 50 basis points to 7.75% in April. The decision was unanimous, and Barnabás Virág, the bank's vice-president, said that the key rate could fall to 6.50-7.00% by the middle of the year, provided the macro data remain strong. The HNB will decide on the basis of incoming data, and inflation developments will remain an important factor in the decision. Following the rate decision, the forint strengthened slightly against the euro and stabilized around the 392 level at the end of the month.

The Premium Everest fund's return was slightly negative in April. Following last month's tactical decision, the weighting within the bond asset class remains neutral for developed market bonds, while emerging market bonds remain slightly overweight. Domestic bond exposure is now slightly overweight relative to the benchmark. Within equity exposure, emerging and central European equities are held at a level in line with the benchmark, while developed equities remain slightly overweight. In terms of commodity exposure, the fund is slightly overweight in gold. The absolute return exposure remains at a neutral level.
